The Geological Society of America Bulletin
Subject Index To Volume 91, No. 1-12, 1980

absolute age *see also* geochronology; isotopes

absolute age—dates
glauconite: Rb-Sr glauconite isochron of the Eocene Castle Hayne Limestone, North Carolina
(Harris, W. B., *et al.*) 10: I 587-592
gneiss: Age of the basement rocks of Southwest Montana
(James, H. L., *et al.*) 1: I 11-15
ophiolite: Chronology of the structural and petrologic development of the Southwest Sierra Nevada foothills, California
(Saleeby, J., *et al.*) 6: I 317-320, II 1416-1535
peat: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
phyllite: Devonian metamorphic event in the northeastern Klamath Mountains, California
(Cashman, S. M.) 8: I 453-459
sediments: The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336
shells: Late Foxe glaciation of southern Baffin Island, N.W.T., Canada
(Miller, G. H.) 7: I 399-405
volcanic rocks: Cretaceous volcanism, Excelsior Mountains, Nevada
(Speed, R. C., *et al.*) 7: I 392-398
— Geology and petrology of the Nordeste volcanic complex, Sao Miguel, Azores
(Fernandez, L. A.) 12: I 675-680, II 2457-2557
zircon: Age of zircon from volcanic rocks of the central North Carolina Piedmont and tectonic implications for the Carolina volcanic slate belt
(Wright, J. E., *et al.*) 5: I 287-294
— Allochthonous Jurassic ophiolite in Northwest Washington
(Whetten, J. T., *et al.*) 6: I 359-368

acoustical surveys *see under* geophysical surveys *under* Atlantic Ocean

aeromagnetic surveys *see* magnetic surveys *under* geophysical surveys *under* New Mexico

Africa *see also* Egypt; Libya; South Africa; Sudan; Tunisia

Africa—tectonophysics
crust: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706
— Trace elements in continental-margin magmatism; Part II, Trace elements in Ben Ghnema Batholith and nature of the Precambrian crust in central North Africa
(Rogers, J. J. W., *et al.*) 8: I 445-447, II 1742-1788

Alabama—petrology
metamorphic rocks: The Hillabee Greenstone; a mafic volcanic complex in the Appalachian Piedmont of Alabama
(Tull, J. F., *et al.*) 1: I 27-36

Alaska—geophysical surveys
seismic surveys: Large-scale structure of deep strata beneath Kodiak shelf, Alaska
(Fisher, M. A., *et al.*) 4: I 218-224

Alaska—seismology
crust: Large-scale structure of deep strata beneath Kodiak shelf, Alaska
(Fisher, M. A., *et al.*) 4: I 218-224

Alaska—stratigraphy
Paleozoic: Collision-deformed Paleozoic continental margin of Alaska; foundation for microplate accretion
(Churkin, M., Jr., *et al.*) 11: I 648-654

Alaska—tectonophysics
plate tectonics: Collision-deformed Paleozoic continental margin of Alaska; foundation for microplate accretion
(Churkin, M., Jr., *et al.*) 11: I 648-654

algae—nannofossils
Neogene: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444

andesite *see under* genesis *under* igneous rocks

Antarctic Ocean—stratigraphy
Cenozoic: Cenozoic biogenic silica sedimentation in the Antarctic Ocean
(Brewster, N. A.) 6: I 337-347

Antarctica—tectonophysics
plate tectonics: Paleomagnetic evidence for oroclinal bending of the southern Antarctic Peninsula
(Kellogg, K. S.) 7: I 414-420

Apennines—tectonophysics
crust: Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587

Appalachians—geochronology
Proterozoic: Age of zircon from volcanic rocks of the central North Carolina Piedmont and tectonic implications for the Carolina volcanic slate belt
(Wright, J. E., *et al.*) 5: I 287-294

Appalachians—petrology
metamorphic rocks: Precambrian(?) crystallization and Permian(?) metamorphism of hypersolvus granite in the Avalonian terrane of Rhode Island
(Day, H. W., *et al.*) 7: I 389-391, II 1669-1741

Appalachians—stratigraphy
Pennsylvanian: An alternative to the barrier-shoreline model for deposition of Mississippian and Pennsylvanian rocks in northeastern Kentucky
(Ettensohn, F. R.) 3: I 130-135, II 934-1056

Appalachians—structural geology
tectonics: An alternative to the barrier-shoreline model for deposition of Mississippian and Pennsylvanian rocks in northeastern Kentucky
(Ettensohn, F. R.) 3: I 130-135, II 934-1056
— Mesozoic erosion rates in northern New England
(Doherty, J. T., *et al.*) 1: I 16-20
— The Hillabee Greenstone; a mafic volcanic complex in the Appalachian Piedmont of Alabama
(Tull, J. F., *et al.*) 1: I 27-36

Arabian Peninsula *see also* Kuwait; Saudi Arabia

Arabian Peninsula—geophysical surveys
seismic surveys: Tertiary faulting beneath Wadi Al-Batin (Kuwait)
(Al-Sarawi, A. M.) 10: I 610-618

Arabian Peninsula—stratigraphy
Permian: Permian-Carboniferous glaciation in the Arabian Peninsula
(McClure, H. A.) 12: I 707-712

Arabian Peninsula—tectonophysics
crust: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706

Arctic region—geomorphology
weathering: Late Foxe glaciation of southern Baffin Island, N.W.T., Canada
(Miller, G. H.) 7: I 399-405

Arthropoda—Crustacea
Paleozoic: Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift; discussion and reply
(Burrett, C. F., *et al.*) 9: I 570-572

Asia *see also* Arabian Peninsula

associations—stratigraphy
North Am. Comm. on Stratigraphic Nomenclature: North American Commission on Stratigraphic Nomenclature; Note 52, A preliminary proposal for a chronometric time scale for the Precambrian of the United States and Mexico
(Harrison, J. E., *et al.*) 6: I 377-380
— North American Commission on Stratigraphic Nomenclature; Report 8, Amendment of Code concerning terminology for igneous and high-grade metamorphic rocks
(Henderson, J. B., *et al.*) 6: I 374-376

Atlantic Coastal Plain—stratigraphy
Pleistocene: The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336

Atlantic Ocean *see also* Azores

Atlantic Ocean—geophysical surveys
acoustical surveys: Furrowed mud waves on the western Bermuda Rise
(Embley, R. E., *et al.*) 12: I 731-740
seismic surveys: Crustal structure of the North Atlantic on the basis of large-airgun - sonobuoy data
(Houtz, R. E.) 7: I 406-413

Atlantic Ocean—oceanography
ocean circulation: Furrowed mud waves on the western Bermuda Rise
(Embley, R. E., *et al.*) 12: I 731-740
ocean floors: Structural behavior of fracture zones symmetric and asymmetric about a spreading axis; Mid-Atlantic Ridge (latitude 23°N to 27°N)
(Rona, P. A., *et al.*) 8: I 485-494

Atlantic Ocean—seismology
crust: Crustal structure of the North Atlantic on the basis of large-airgun - sonobuoy data
(Houtz, R. E.) 7: I 406-413

Atlantic Ocean—stratigraphy
Cretaceous: Tertiary and Cretaceous paleoenvironments in the Southwest Atlantic Ocean; preliminary results of Deep Sea Drilling Project Leg 71
(Ludwig, W. J., *et al.*) 11: I 655-664
Tertiary: Tertiary and Cretaceous paleoenvironments in the Southwest Atlantic Ocean; preliminary results of Deep Sea Drilling Project Leg 71
(Ludwig, W. J., *et al.*) 11: I 655-664

Atlantic Ocean—tectonophysics
sea-floor spreading: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54
— Structural behavior of fracture zones symmetric and asymmetric about a spreading axis; Mid-Atlantic Ridge (latitude 23°N to 27°N)
(Rona, P. A., *et al.*) 8: I 485-494

Australasia *see also* New Zealand

Azores—geochronology
Cenozoic: Geology and petrology of the Nordeste volcanic complex, Sao Miguel, Azores
(Fernandez, L. A.) 12: I 675-680, II 2457-2557

Basin and Range Province—structural geology
neotectonics: Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States
(Stewart, J. H.) 8: I 460-464
— Seismotectonic regionalization of the Great Basin, and comparison of moment rates computed from Holocene strain and historic seismicity
(Greensfelder, R. W., *et al.*) 9: I 518-523, II 2039-2111

Basin and Range Province—tectonophysics
crust: Regional gravity survey, northern Marysvale volcanic field, South-central Utah
(Holliday, M. E., *et al.*) 8: I 502-508

batholiths *see under* intrusions

biogeography *see also under* paleontology *under* continental drift

biogeography—Arthropoda
Holocene: Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift; discussion and reply
(Burrett, C. F., *et al.*) 9: I 570-572

biography—general
Bray, John W.: Presentation of the E. B. Burwell Award to Evert Hoek and John W. Bray
(Jahns, R. H., *et al.*) 4: I 189, II 1110-1113
Bretz, J Harlen: Presentation of the Penrose Medal to J Harlen Bretz
(Hubbert, M. K., *et al.*) 4: I 189, II 1091-1095
Domenico, Patrick A.: Presentation of the O. E. Meinzer Award to John M. Sharp, Jr. and Patrick A. Domenico
(White, G. W., *et al.*) 4: I 189, II 1102-1110
Elsasser, Walter: Presentation of the Arthur L. Day Medal to Walter Elsasser
(Cox, A., *et al.*) 4: I 189, II 1095-1100
Hacquebard, Peter A.: Presentation of the Gilbert H. Cady Award to Peter A. Hacquebard
(Simon, J. A., *et al.*) 4: I 189, II 1113-1118
Hoek, Evert: Presentation of the E. B. Burwell Award to Evert Hoek and John W. Bray
(Jahns, R. H., *et al.*) 4: I 189, II 1110-1113
Schumm, Stanley A.: Presentation of the Kirk Bryan Award to Stanley A. Schumm
(Bull, W. B., *et al.*) 4: I 189, II 1100-1102
Sharp, John M., Jr.: Presentation of the O. E. Meinzer Award to John M. Sharp, Jr. and Patrick A. Domenico
(White, G. W., *et al.*) 4: I 189, II 1102-1110

California—areal geology
Panamint Range: Stratigraphy, structure, and metamorphism in the central Panamint Mountains (Telescope Peak Quadrangle), Death Valley area, California
(Labotka, T. C., *et al.*) 3: I 125-129, II 843-933

California—geochemistry
trace elements: Petrology of the Castle Crags Pluton, Klamath Mountains, California
(Vennum, W. R.) 5: I 255-258, II 1332-1393
— Use of immobile trace elements to determine original tectonic setting of eruption of metabasalts, northern Sierra Nevada, California
(Brooks, E. R., *et al.*) 11: I 665-671

California—geochronology
Devonian: Devonian metamorphic event in the northeastern Klamath Mountains, California
(Cashman, S. M.) 8: I 453-459

California—geomorphology
fluvial features: A sediment budget and an analysis of geomorphic process in the Van Duzen River basin, North coastal California, 1941-1975
(Kelsey, H. M.) 4: I 190-195, II 1119-1216
weathering: Soils and subsurface rock-weathering features of Sherwin and pre-Sherwin glacial deposits, eastern Sierra Nevada, California
(Birkeland, P. W., *et al.*) 4: I 238-244

California—petrology
igneous rocks: Late Cenozoic volcanic rocks of the southern Sierra Nevada, California; I, Geology and petrology
(Moore, J. G., *et al.*) 9: I 515-518, II 1995-2038
intrusions: Geology of the Pine Hill intrusive complex, a layered gabbroic body in the western Sierra Nevada foothills, California
(Springer, R. K.) 7: I 381-385, II 1536-1626
metamorphic rocks: Devonian metamorphic event in the northeastern Klamath Mountains, California
(Cashman, S. M.) 8: I 453-459

California—sedimentary petrology
sedimentation: Wind-driven sand in Coachella Valley, California; further data
(Sharp, R. P.) 12: I 724-730

California—stratigraphy
Cretaceous: Franciscan complex limestone deposited at 17° south paleolatitude
(Alvarez, W., *et al.*) 8: I 476-484
Ordovician: Lower Paleozoic metasedimentary rocks in the East-central Sierra Nevada, California; correlation with Great Basin formations
(Moore, J. N., *et al.*) 1: I 37-43
Quaternary: Soils and subsurface rock-weathering features of Sherwin and pre-Sherwin glacial deposits, eastern Sierra Nevada, California
(Birkeland, P. W., *et al.*) 4: I 238-244

California—structural geology
neotectonics: Twentieth-century crustal deformation in the Garlock Fault-Slate Range area, southeastern California
(Smith, G. I., *et al.*) 9: I 524-534
tectonics: Geologic cross section of the central Klamath Mountains, California
(Davis, G. A., *et al.*) 3: I 139-142
— Petrology, structure, and regional tectonics of South Fork Mountain Schist, Pine Ridge Summit, northern California
(Monsen, S. A., *et al.*) 6: I 369-373

California—tectonophysics
plate tectonics: Chronology of the structural and petrologic development of the Southwest Sierra Nevada foothills, California
(Saleeby, J., *et al.*) 6: I 317-320, II 1416-1535
— Geometric model for Neogene crustal rotations in southern California
(Luyendyk, B. P., *et al.*) 4: I 211-217
— Use of immobile trace elements to determine original tectonic setting of eruption of metabasalts, northern Sierra Nevada, California
(Brooks, E. R., *et al.*) 11: I 665-671

Cambrian *see also under* geochronology *under* North Carolina; *see also under* stratigraphy *under* Great Basin; Oklahoma

Canada *see also* Appalachians; Atlantic Coastal Plain; Canadian Shield; Great Lakes; Great Lakes region; Northwest Territories; Ontario; Rocky Mountains

Canadian Shield—structural geology
tectonics: Regional basement geology of Lake Huron
(O'Hara, N. W., *et al.*) 6: I 348-358

Canadian Shield—tectonophysics
crust: The Great Lakes tectonic zone; a major crustal structure in central North America
(Sims, P. K., *et al.*) 12: I 690-698

carbonate rocks *see under* sedimentary rocks

Carboniferous *see also under* stratigraphy *under* Saudi Arabia

Caribbean Sea—stratigraphy
Quaternary: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444

Cenozoic *see also under* geochronology *under* Azores; *see also under* stratigraphy *under* Antarctic Ocean; Oregon

Central America *see also* Guatemala

Chile—oceanography
sediments: Surface sediments of the Peru-Chile continental margin and the Nazca Plate
(Krissek, L. A., *et al.*) 6: I 321-331

clastic rocks *see under* sedimentary rocks

clastic sediments *see under* sediments

clay mineralogy—experimental studies
tephrochronology: Use of altered volcanic ash falls in stratigraphic studies of coal-bearing sequences; an example from the Upper Cretaceous Ferron Sandstone Member of the Mancos Shale in central Utah
(Ryer, T. A., *et al.*) 10: I 579-586

Colorado—geochronology
fission-track dating: The significance of fission-track ages of apatite in relation to the tectonic history of the Front and Sawatch ranges, Colorado
(Bryant, B., *et al.*) 3: I 156-164

Colorado—geophysical surveys
seismic surveys: Crustal structure of the southern Rocky Mountains from seismic measurements
(Prodehl, C., *et al.*) 3: I 147-155

Colorado—sedimentary petrology
sedimentation: Calculations of flows needed to transport coarse fraction of Boulder Creek alluvium at Boulder, Colorado
(Bradley, W. C., *et al.*) 3: I 135-138, II 1057-1090

Colorado Plateau—petrology
igneous rocks: An alkali-basalt through trachyte suite, Mesa Chivato, Mount Taylor volcanic field, New Mexico
(Crumpler, L. S.) 5: I 253-255, II 1293-1331

Colorado Plateau—tectonophysics
crust: Regional gravity survey, northern Marysvale volcanic field, South-central Utah
(Holliday, M. E., *et al.*) 8: I 502-508

congresses *see* symposia

continental drift—paleontology
biogeography: Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift; discussion and reply
(Burrett, C. F., *et al.*) 9: I 570-572

continental shelf *see also* marine geology; *see also under* oceanography *under* Pacific Ocean

continental slope *see also* marine geology

Cretaceous *see also under* geochronology *under* Nevada; *see also under* stratigraphy *under* Atlantic Ocean; California; Utah

crust *see also under* seismology *under* Alaska; Atlantic Ocean; Rocky Mountains; *see also under* tectonophysics *under* Africa; Apennines; Arabian Peninsula; Basin and Range Province; Canadian Shield; Colorado Plateau; Egypt; Great Basin; Indian Ocean; Italy; Mediterranean region; Mediterranean Sea; New Mexico; North America; Red Sea region; Southwestern U.S.; Sudan

crystal chemistry *see also* crystal growth; minerals

crystal chemistry—framework silicates, zeolite group
authigenic minerals: Zeolitization of Miocene volcaniclastic rocks, southern Desatoya Mountains, Nevada
(Barrows, K. J.) 4: I 199-210

crystal growth *see also* crystal chemistry; minerals

crystal growth—framework silicates, feldspar group
myrmekite: Myrmekite as a marker between preaqueous and postaqueous phase saturation in granitic systems; discussion and reply
(Phillips, E. R., *et al.*) 11: I 672-674

crystal growth—mechanism
processes: Displacement of inert mineral grains by growing porphyroblasts; a volume balance constraint
(Ferguson, C. C.) 9: I 541-544

crystal structure *see also* crystal chemistry; minerals

deformation *see also* structural analysis

deformation—experimental studies
flow: Experimental folding of rocks under confining pressure; Part VIII, Forced folding of unconsolidated sand and of lubricated layers of limestone and sandstone
(Friedman, M., *et al.*) 5: I 307-312

deformation—field studies
compression: Twentieth-century crustal deformation in the Garlock Fault-Slate Range area, southeastern California
(Smith, G. I., *et al.*) 9: I 524-534
shock: Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior; replies
(Sage, R. P.) 5: I 313-316
strain: Slaty cleavage unrelated to tectonic dewatering; the Siamo and Michigamme slates revisited
(Beutner, E. C.) 3: I 171-178

deformation—theoretical studies
strain: Seismotectonic regionalization of the Great Basin, and comparison of moment rates computed from Holocene strain and historic seismicity
(Greensfelder, R. W., *et al.*) 9: I 518-523, II 2039-2111

Devonian *see also under* geochronology *under* California; *see also under* stratigraphy *under* New England

diagenesis *see also* sedimentation

diagenesis—processes
authigenesis: Zeolitization of Miocene volcaniclastic rocks, southern Desatoya Mountains, Nevada
(Barrows, K. J.) 4: I 199-210

diastrophism *see* orogeny

diatremes *see under* intrusions

drumlins *see under* glacial features *under* glacial geology

earthquakes *see also* seismology

Eastern Hemisphere *see also* Africa; Antarctic Ocean; Antarctica; Atlantic Ocean; Indian Ocean

Egypt—tectonophysics
crust: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706

electrical logging *see* well-logging

engineering geology *see also* deformation; geodesy; ground water; rock mechanics; soil mechanics

England—sedimentary petrology
sedimentation: Longitudinal changes in size and sorting of stream-bed material in four English rivers
(Knighton, A. D.) 1: I 55-62

Eocene *see also under* geochronology *under* North Carolina

epeirogeny *see also* orogeny

erosion *see under* processes *under* geomorphology

Europe *see also* the individual nations

faults—displacements
normal faults: Neogene deformation in northern Tunisia; origin of the eastern Atlas by microplate-continental margin collision
(Cohen, C. R., *et al.*) 4: I 225-237
overthrust faults: The Heart Mountain break-away fault, northwestern Wyoming
(Pierce, W. G.) 5: I 272-281
strike-slip faults: Decollement in the Hudson River valley
(Murphy, P. J., *et al.*) 5: I 258-262, II 1394-1415
thrust faults: Allochthonous Jurassic ophiolite in Northwest Washington
(Whetten, J. T., *et al.*) 6: I 359-368
— Geologic cross section of the central Klamath Mountains, California
(Davis, G. A., *et al.*) 3: I 139-142
— Mechanics of thin-skinned fold-and-thrust belts; discussions
(Elliott, D., *et al.*) 3: I 185-188

faults—distribution
patterns: Tertiary faulting beneath Wadi Al-Batin (Kuwait)
(Al-Sarawi, A. M.) 10: I 610-618

faults—systems
block structures: Geometric model for Neogene crustal rotations in southern California
(Luyendyk, B. P., *et al.*) 4: I 211-217
— Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States
(Stewart, J. H.) 8: I 460-464
grabens: Deformation of the Wenatchee Formation and its bearing on the tectonic history of the Chiwaukum Graben, Washington, during Cenozoic time
(Gresens, R. L.) 1: I 4-7, II 115-155
— Immature plate boundary zones studied with a submersible in the Gulf of California
(Lonsdale, P., *et al.*) 9: I 555-569

fission-track dating *see under* geochronology

folds—distribution
patterns: Structural synthesis of the southern and central Adirondacks; a model for the Adirondacks as a whole and plate-tectonics interpretations
(McLelland, J., *et al.*) 2: I 68-72, II 208-292

folds—mechanics
flow: Experimental folding of rocks under confining pressure; Part VIII, Forced folding of unconsolidated sand and of lubricated layers of limestone and sandstone
(Friedman, M., *et al.*) 5: I 307-312

folds—orientation
nappes: A structural model for the northwestern Adirondacks based on leucogranitic gneisses near Canton and Pyrites, New York
(Romey, W. D., *et al.*) 2: I 97-100, II 505-588
— Paleomagnetic evidence in support of a middle Proterozoic (Helikian) collision between North America and Gondwanaland as a cause of the metamorphism and deformation in the Adirondacks
(Seyfert, C. K.) 2: I 118-120, II 816-842
— Polyphase Precambrian deformation and stratigraphic relations, central to southeastern Adirondack Mountains, New York; a reinterpretation
(Turner, B. B.) 2: I 72-74, II 293-325

folds—style
isoclinal folds: Fold growth and transposition in metasedimentary rocks of the southeastern Adirondacks
(Granath, J. W., *et al.*) 2: I 75-77, II 326-348
synclines: Stratigraphic sequence of the Gile Mountain and Waits River formations near Royalton, Vermont
(Fisher, G. W., *et al.*) 5: I 282-286

foliation *see also* structural analysis

foliation—style
slaty cleavage: Slaty cleavage unrelated to tectonic dewatering; the Siamo and Michigamme slates revisited
(Beutner, E. C.) 3: I 171-178

foraminifera—biostratigraphy
Cretaceous: Franciscan complex limestone deposited at 17° south paleolatitude
(Alvarez, W., *et al.*) 8: I 476-484
Neogene: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444

fossils *see* appropriate fossil group

foundations *see also* rock mechanics; soil mechanics

fractures—style
conical fractures: Tectonic origin for Sudbury, Ontario, shatter cones; discussion and reply
(Pattison, E. F., *et al.*) 12: I 754-756

geochronology *see also* absolute age

geochronology—fission-track dating
apatite: The significance of fission-track ages of apatite in relation to the tectonic history of the Front and Sawatch ranges, Colorado
(Bryant, B., *et al.*) 3: I 156-164
plutonic rocks: Mesozoic erosion rates in northern New England
(Doherty, J. T., *et al.*) 1: I 16-20

geochronology—paleomagnetism
magnetostratigraphy: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444
— Paleomagnetic studies of central North Pacific sediment cores; stratigraphy, sedimentation rates, and the origin of magnetic instability
(Prince, R. A., *et al.*) 8: I 447-449, II 1789-1835
— Tertiary and Cretaceous paleoenvironments in the Southwest Atlantic Ocean; preliminary results of Deep Sea Drilling Project Leg 71
(Ludwig, W. J., *et al.*) 11: I 655-664
till: Remanence resetting by shock-induced thixotropy in the Seminary Till, Scarborough, Ontario, Canada
(Symons, D. T. A., *et al.*) 10: I 593-598

geochronology—racemization
Mollusca: Late Foxe glaciation of southern Baffin Island, N.W.T., Canada
(Miller, G. H.) 7: I 399-405

geochronology—tephrochronology
coal seams: Use of altered volcanic ash falls in stratigraphic studies of coal-bearing sequences; an example from the Upper Cretaceous Ferron Sandstone Member of the Mancos Shale in central Utah
(Ryer, T. A., *et al.*) 10: I 579-586

geochronology—time scales
Precambrian: North American Commission on Stratigraphic Nomenclature; Note 52, A preliminary proposal for a chronometric time scale for the Precambrian of the United States and Mexico
(Harrison, J. E., *et al.*) 6: I 377-380

geodesy—surveys
California: Twentieth-century crustal deformation in the Garlock Fault-Slate Range area, southeastern California
(Smith, G. I., *et al.*) 9: I 524-534

geomorphology *see also* glacial geology

geomorphology—fluvial features
drainage basins: A sediment budget and an analysis of geomorphic process in the Van Duzen River basin, North coastal California, 1941-1975
(Kelsey, H. M.) 4: I 190-195, II 1119-1216
streams: Rhythmic spacing and origin of pools and riffles; discussion and reply
(Roy, A. G., *et al.*) 4: I 248-250

geomorphology—impact features
meteor craters: Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior; replies
(Sage, R. P.) 5: I 313-316

geomorphology—landform description
outcrops: The extraordinary striated outcrop at Saqsaywaman, Peru; discussion and reply
(Marocco, R., *et al.*) 4: I 251-252

geomorphology—processes
abrasion: Bed-rock incision by streams
(Foley, M. G.) 10: I 577-578, II 2189-2213
— Quaternary diversion and incision, Dearborn River, Montana
(Foley, M. G.) 10: I 576-577, II 2152-2188
erosion: Contemporary uplift and erosion of the Southern Alps, New Zealand
(Adams, J.) 1: I 2-4, II 1-114

geomorphology—solution features
sinkholes: Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota
(Laury, R. L.) 8: I 465-475

geomorphology—volcanic features
volcanoes: Geology and petrology of Volcan Ceboruco, Nayarit, Mexico
(Nelson, S. A.) 11: I 639-643, II 2290-2431

geophysical surveys *see* acoustical surveys *under* geophysical surveys *under* Atlantic Ocean; *see* gravity surveys *under* geophysical surveys *under* Utah; *see* magnetic surveys *under* geophysical surveys *under* New Mexico; *see* seismic surveys *under* geophysical surveys *under* Alaska; Arabian Peninsula; Atlantic Ocean; Colorado; Wyoming; *see* surveys *under* geophysical surveys *under* Great Lakes

geophysics *see also* deformation

geosynclines *see also* orogeny

glacial geology *see also* geomorphology

glacial geology—ancient ice ages
Carboniferous: Permian-Carboniferous glaciation in the Arabian Peninsula
(McClure, H. A.) 12: I 707-712
Proterozoic: Upper Precambrian (Eocambrian) Mineral Fork Tillite of Utah; a continental glacial and glaciomarine sequence
(Ojakangas, R. W., *et al.*) 8: I 495-501

glacial geology—glacial features
drumlins: An analysis of drumlin form in the northeastern and North-central United States
(Mills, H. H.) 11: I 637-639, II 2214-2289
moraines: Late Foxe glaciation of southern Baffin Island, N.W.T., Canada
(Miller, G. H.) 7: I 399-405

glacial geology—glaciation
deglaciation: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
deposition: Quaternary diversion and incision, Dearborn River, Montana
(Foley, M. G.) 10: I 576-577, II 2152-2188
extent: Valders-Two Creeks, Wisconsin, revisited; the Valders Till is most likely post-Twocreekan
(Black, R. F.) 12: I 713-723

glaciation *see under* glacial geology

grabens *see under* systems *under* faults

graded bedding *see under* planar bedding structures *under* sedimentary structures; *see under* turbidity current structures *under* sedimentary structures

granite *see also under* granite-granodiorite family *under* igneous rocks

gravity surveys *see under* geophysical surveys *under* Utah

Great Basin—stratigraphy
Cambrian: Lower Paleozoic metasedimentary rocks in the East-central Sierra Nevada, California; correlation with Great Basin formations
(Moore, J. N., *et al.*) 1: I 37-43

Great Basin—structural geology
neotectonics: Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States
(Stewart, J. H.) 8: I 460-464

Great Basin—tectonophysics
crust: Seismotectonic regionalization of the Great Basin, and comparison of moment rates computed from Holocene strain and historic seismicity
(Greensfelder, R. W., *et al.*) 9: I 518-523, II 2039-2111

Great Lakes—geophysical surveys
surveys: Regional basement geology of Lake Huron
(O'Hara, N. W., *et al.*) 6: I 348-358

Great Lakes region—geomorphology
glacial geology: An analysis of drumlin form in the northeastern and North-central United States
(Mills, H. H.) 11: I 637-639, II 2214-2289
meteor craters: Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior; replies
(Sage, R. P.) 5: I 313-316

Great Lakes region—stratigraphy
Pleistocene: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
— Valders-Two Creeks, Wisconsin, revisited; the Valders Till is most likely post-Twocreekan
(Black, R. F.) 12: I 713-723
Proterozoic: Early Proterozoic sedimentary basins of the Lake Superior region
(Larue, D. K., *et al.*) 8: I 450-452, II 1836-1874

Great Lakes region—structural geology
tectonics: Regional basement geology of Lake Huron
(O'Hara, N. W., *et al.*) 6: I 348-358
— The Great Lakes tectonic zone; a major crustal structure in central North America
(Sims, P. K., *et al.*) 12: I 690-698

ground water *see also* hydrology

ground water—surveys
Kuwait: Tertiary faulting beneath Wadi Al-Batin (Kuwait)
(Al-Sarawi, A. M.) 10: I 610-618

Guatemala—oceanography
ocean floors: Leg 67; the Deep Sea Drilling Project Mid-America Trench transect off Guatemala
(von Huene, R., *et al.*) 7: I 421-432

Gulf of California—tectonophysics
sea-floor spreading: Immature plate boundary zones studied with a submersible in the Gulf of California
(Lonsdale, P., *et al.*) 9: I 555-569

hydrogeology *see also* ground water; hydrology

hydrology *see also* ground water

hydrology—surveys
Boulder Creek: Calculations of flows needed to transport coarse fraction of Boulder Creek alluvium at Boulder, Colorado
(Bradley, W. C., *et al.*) 3: I 135-138, II 1057-1090
New Zealand: Contemporary uplift and erosion of the Southern Alps, New Zealand
(Adams, J.) 1: I 2-4, II 1-114
Van Duzen River basin: A sediment budget and an analysis of geomorphic process in the Van Duzen River basin, North coastal California, 1941-1975
(Kelsey, H. M.) 4: I 190-195, II 1119-1216

igneous rocks *see also* magmas; metamorphic rocks; phase equilibria

igneous rocks—basalt family
geochemistry: Geochemical cross sections through the Watchung Basalt of New Jersey
(Puffer, J. H., *et al.*) 1: I 7-10, II 156-191

igneous rocks—classification
intrusive rocks: Lithostratigraphic classification of basement rocks of the Wichita Province, Oklahoma
(Powell, B. N., *et al.*) 9: I 509-514, II 1875-1994

igneous rocks—gabbro family
anorthosite: Rare-earth-element geochemistry of anorthosite and related rocks from the Adirondacks, New York, and other massif-type complexes
(Ashwal, L. D., *et al.*) 2: I 105-107, II 659-684
petrology: Geology of the Pine Hill intrusive complex, a layered gabbroic body in the western Sierra Nevada foothills, California
(Springer, R. K.) 7: I 381-385, II 1536-1626

igneous rocks—genesis
andesite: Geology and petrology of Volcan Ceboruco, Nayarit, Mexico
(Nelson, S. A.) 11: I 639-643, II 2290-2431

igneous rocks—granite-granodiorite family
adamellite: Trace elements in continental-margin magmatism; Part II, Trace elements in Ben Ghnema Batholith and nature of the Precambrian crust in central North Africa
(Rogers, J. J. W., *et al.*) 8: I 445-447, II 1742-1788
composition: Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland
(Stephens, W. E., *et al.*) 3: I 165-170
granite: Emplacement of the Butler Hill Granite, a shallow pluton within the St. Francois Mountains Batholith, southeastern Missouri
(Sides, J. R.) 9: I 535-540

igneous rocks—nomenclature
intrusive rocks: North American Commission on Stratigraphic Nomenclature; Report 8, Amendment of Code concerning terminology for igneous and high-grade metamorphic rocks
(Henderson, J. B., *et al.*) 6: I 374-376

igneous rocks—plutonic rocks
petrology: Petrology of the Castle Crags Pluton, Klamath Mountains, California
(Vennum, W. R.) 5: I 255-258, II 1332-1393

igneous rocks—pyroclastics and glasses
volcanic glass: Calculation of the refractive index of silicate glasses from chemical composition
(Church, B. N., *et al.*) 10: I 619-625

igneous rocks—textures
orbicular texture: Igneous origin of the orbicular rocks of the Sandia Mountains, New Mexico; discussion and reply
(Thompson, T. B., *et al.*) 4: I 245-247

igneous rocks—ultramafic family
ophiolite: Allochthonous Jurassic ophiolite in Northwest Washington
(Whetten, J. T., *et al.*) 6: I 359-368
— Remnants of a pre-Late Jurassic ocean in northern Turkey; fragments of Permian-Triassic paleo-Tethys?
(Sengor, A. M. C., *et al.*) 10: I 599-609

igneous rocks—volcanic rocks
age: Cretaceous volcanism, Excelsior Mountains, Nevada
(Speed, R. C., *et al.*) 7: I 392-398
complexes: Geology and petrology of the Nordeste volcanic complex, Sao Miguel, Azores
(Fernandez, L. A.) 12: I 675-680, II 2457-2557
composition: Late Cenozoic volcanic rocks of the southern Sierra Nevada, California; I, Geology and petrology
(Moore, J. G., *et al.*) 9: I 515-518, II 1995-2038
genesis: Geology and petrology of Volcan Ceboruco, Nayarit, Mexico
(Nelson, S. A.) 11: I 639-643, II 2290-2431
geochemistry: Trace elements in continental-margin magmatism; Part I, Trace elements in the Clarno Formation of central Oregon and the nature of the continental margin on which eruption occurred
(Rogers, J. J. W., *et al.*) 4: I 196-198, II 1217-1292
petrography: Hyaloclastite and lava flows on young seamounts examined with a submersible
(Lonsdale, P., *et al.*) 9: I 545-554
petrology: An alkali-basalt through trachyte suite, Mesa Chivato, Mount Taylor volcanic field, New Mexico
(Crumpler, L. S.) 5: I 253-255, II 1293-1331

impact features *see under* geomorphology

Indian Ocean—oceanography
ocean floors: Submarine topography and shallow structure of the Madagasgar Ridge, western Indian Ocean
(Goslin, J., *et al.*) 12: I 741-753

Indian Ocean—tectonophysics
crust: Submarine topography and shallow structure of the Madagasgar Ridge, western Indian Ocean
(Goslin, J., *et al.*) 12: I 741-753

Insecta—Coleoptera
Pleistocene: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306

intrusions—age
absolute age: Chronology of the structural and petrologic development of the Southwest Sierra Nevada foothills, California
(Saleeby, J., *et al.*) 6: I 317-320, II 1416-1535

intrusions—batholiths
geochemistry: Trace elements in continental-margin magmatism; Part II, Trace elements in Ben Ghnema Batholith and nature of the Precambrian crust in central North Africa
(Rogers, J. J. W., *et al.*) 8: I 445-447, II 1742-1788

intrusions—diatremes
interpretation: Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior; replies
(Sage, R. P.) 5: I 313-316

intrusions—extent
rift zones: New evidence for magmatic intrusion beneath the Rio Grande Rift, New Mexico
(Towle, J. N.) 10: I 626-630

intrusions—genesis
emplacement: The extraordinary striated outcrop at Saqsaywaman, Peru; discussion and reply
(Marocco, R., *et al.*) 4: I 251-252

intrusions—layered intrusions
petrology: Geology of the Pine Hill intrusive complex, a layered gabbroic body in the western Sierra Nevada foothills, California
(Springer, R. K.) 7: I 381-385, II 1536-1626

intrusions—petrology
complexes: Geology of the Precambrian rocks between Elizabethtown and Mineville, eastern Adirondacks, New York
(Gasparik, T.) 2: I 78-88

intrusions—plutons
composition: Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland
(Stephens, W. E., *et al.*) 3: I 165-170
crystallization: Petrology of the Castle Crags Pluton, Klamath Mountains, California
(Vennum, W. R.) 5: I 255-258, II 1332-1393

emplacement: Emplacement of the Butler Hill Granite, a shallow pluton within the St. Francois Mountains Batholith, southeastern Missouri
(Sides, J. R.) 9: I 535-540
— Polyphase Precambrian deformation and stratigraphic relations, central to southeastern Adirondack Mountains, New York; a reinterpretation
(Turner, B. B.) 2: I 72-74, II 293-325

intrusions—stocks
evolution: Mesozoic erosion rates in northern New England
(Doherty, J. T., *et al.*) 1: I 16-20

Invertebrata *see also* Arthropoda; foraminifera; Insecta; Mollusca; Trilobita

iron—abundance
sediments: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

isotope dating *see* absolute age

isotopes *see also* absolute age; geochronology

isotopes—strontium
Sr-87/Sr-86: An alkali-basalt through trachyte suite, Mesa Chivato, Mount Taylor volcanic field, New Mexico
(Crumpler, L. S.) 5: I 253-255, II 1293-1331
— Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland
(Stephens, W. E., *et al.*) 3: I 165-170

Italy—stratigraphy
Mesozoic: Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587
Paleogene: Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587

Italy—tectonophysics
crust: Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587

Jamaica—tectonophysics
plate tectonics: Submarine-canyon complex among Cretaceous island-arc sediments, western Jamaica
(Grippi, J., *et al.*) 3: I 179-184

Jurassic *see also under* geochronology *under* Washington

Kentucky—stratigraphy
Mississippian: An alternative to the barrier-shoreline model for deposition of Mississippian and Pennsylvanian rocks in northeastern Kentucky
(Ettensohn, F. R.) 3: I 130-135, II 934-1056

Kuwait—structural geology
neotectonics: Tertiary faulting beneath Wadi Al-Batin (Kuwait)
(Al-Sarawi, A. M.) 10: I 610-618

landform description *see under* geomorphology

lava *see also* igneous rocks; magmas

lava—composition
mineral composition: Late Cenozoic volcanic rocks of the southern Sierra Nevada, California; I, Geology and petrology
(Moore, J. G., *et al.*) 9: I 515-518, II 1995-2038

lava—geochemistry
trace elements: Geochemical cross sections through the Watchung Basalt of New Jersey
(Puffer, J. H., *et al.*) 1: I 7-10, II 156-191
— Geology and petrology of Volcan Ceboruco, Nayarit, Mexico
(Nelson, S. A.) 11: I 639-643, II 2290-2431
— Trace elements in continental-margin magmatism; Part I, Trace elements in the Clarno Formation of central Oregon and the nature of the continental margin on which eruption occurred
(Rogers, J. J. W., *et al.*) 4: I 196-198, II 1217-1292

lava—observations
lava flows: Hyaloclastite and lava flows on young seamounts examined with a submersible
(Lonsdale, P., *et al.*) 9: I 545-554

lava—petrology
lava fields: An alkali-basalt through trachyte suite, Mesa Chivato, Mount Taylor volcanic field, New Mexico
(Crumpler, L. S.) 5: I 253-255, II 1293-1331
lava flows: Geology and petrology of the Nordeste volcanic complex, Sao Miguel, Azores
(Fernandez, L. A.) 12: I 675-680, II 2457-2557

Libya—geochemistry
trace elements: Trace elements in continental-margin magmatism; Part II, Trace elements in Ben Ghnema Batholith and nature of the Precambrian crust in central North Africa
(Rogers, J. J. W., *et al.*) 8: I 445-447, II 1742-1788

lineation *see also* foliation; structural analysis

magmas *see also* igneous rocks; intrusions; lava

magmas—composition
tholeiitic composition: Use of immobile trace elements to determine original tectonic setting of eruption of metabasalts, northern Sierra Nevada, California
(Brooks, E. R., *et al.*) 11: I 665-671

magmas—differentiation
fractional crystallization: Petrology of the Castle Crags Pluton, Klamath Mountains, California
(Vennum, W. R.) 5: I 255-258, II 1332-1393
hybridization: Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland
(Stephens, W. E., *et al.*) 3: I 165-170
— Geology of the Precambrian rocks between Elizabethtown and Mineville, eastern Adirondacks, New York
(Gasparik, T.) 2: I 78-88

magmas—geochemistry
rare earths: Rare-earth-element geochemistry of anorthosite and related rocks from the Adirondacks, New York, and other massif-type complexes
(Ashwal, L. D., *et al.*) 2: I 105-107, II 659-684
trace elements: Geochemical cross sections through the Watchung Basalt of New Jersey
(Puffer, J. H., *et al.*) 1: I 7-10, II 156-191

magnetic surveys *see under* geophysical surveys *under* New Mexico

Mammalia—Proboscidea
Quaternary: Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota
(Laury, R. L.) 8: I 465-475

manganese—abundance
sediments: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

mantle *see also under* tectonophysics *under* Southwestern U.S.

marine geology *see also* oceanography

marine geology—instruments
corers: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444

Mars—geomorphology
landslides: A large landslide on Mars; discussion and reply
(Cruden, D. M., *et al.*) 1: I 63-64

Mediterranean region—tectonophysics
crust: Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587
plate tectonics: Neogene deformation in northern Tunisia; origin of the eastern Atlas by micropiate-continental margin collision
(Cohen, C. R., *et al.*) 4: I 225-237
— Pre-Triassic fit and Alpine tectonics of continental blocks in the western Mediterranean; discussions and reply
(Mascle, G. H., *et al.*) 10: I 631-636

Mediterranean Sea—tectonophysics
crust: Pre-Triassic fit and Alpine tectonics of continental blocks in the western Mediterranean; discussions and reply
(Mascle, G. H., *et al.*) 10: I 631-636

meetings *see* symposia

melange *see under* interpretation *under* structural analysis

Mesozoic *see also under* geochronology *under* New England; New Hampshire; *see also under* stratigraphy *under* Italy

metals *see also* iron; manganese

metals—abundance
sediments: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

metamorphic rocks *see also* igneous rocks; metamorphism

metamorphic rocks—age
absolute age: Chronology of the structural and petrologic development of the Southwest Sierra Nevada foothills, California
(Saleeby, J., *et al.*) 6: I 317-320, II 1416-1535

metamorphic rocks—classification
nomenclature: North American Commission on Stratigraphic Nomenclature; Report 8, Amendment of Code concerning terminology for igneous and high-grade metamorphic rocks
(Henderson, J. B., *et al.*) 6: I 374-376

metamorphic rocks—genesis
indicators: Myrmekite as a marker between preaqueous and postaqueous phase saturation in granitic systems; discussion and reply
(Phillips, E. R., *et al.*) 11: I 672-674

metamorphic rocks—geochemistry
trace elements: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706
— The Hillabee Greenstone; a mafic volcanic complex in the Appalachian Piedmont of Alabama
(Tull, J. F., *et al.*) 1: I 27-36

metamorphic rocks—gneisses
age: Age of the basement rocks of Southwest Montana
(James, H. L., *et al.*) 1: I 11-15
distribution: Regional basement geology of Lake Huron
(O'Hara, N. W., *et al.*) 6: I 348-358
extent: Precambrian(?) crystallization and Permian(?) metamorphism of hypersolvus granite in the Avalonian terrane of Rhode Island
(Day, H. W., *et al.*) 7: I 389-391, II 1669-1741
textures: A structural model for the northwestern Adirondacks based on leucogranitic gneisses near Canton and Pyrites, New York
(Romey, W. D., *et al.*) 2: I 97-100, II 505-588

metamorphic rocks—granulites
mineral assemblages: Adirondack mafic granulites and a model lower crust
(Sack, R. O.) 2: I 89-93, II 349-442
— Evaluation of coexisting garnet-biotite, garnet-clinopyroxene, and other Mg-Fe exchange thermometers in Adirondack granulites
(Bohlen, S. R., *et al.*) 2: I 107-109, II 685-719

metamorphic rocks—marbles
mineral assemblages: Calc-silicate reactions in Adirondack marbles; the role of fluids and solid solutions
(Valley, J. W., *et al.*) 2: I 114-117, II 720-815
— Geology and petrogenesis of marbles in the De Kalb area of northern New York
(Ross, G. M.) 2: I 103-105, II 617-658

metamorphic rocks—metaigneous rocks
metabasalt: Use of immobile trace elements to determine original tectonic setting of eruption of metabasalts, northern Sierra Nevada, California
(Brooks, E. R., *et al.*) 11: I 665-671
petrology: Geology of the Precambrian rocks between Elizabethtown and Mineville, eastern Adirondacks, New York
(Gasparik, T.) 2: I 78-88

metamorphic rocks—metaplutonic rocks
petrology: Stark Complex (Dexter Lake area); petrology, chemistry, structure, and relation to other green rock complexes and layered gneisses, northern Adirondacks, New York
(Brock, B. S.) 2: I 93-97, II 443-504

metamorphic rocks—metasedimentary rocks
fabric: Fold growth and transposition in metasedimentary rocks of the southeastern Adirondacks
(Granath, J. W., *et al.*) 2: I 75-77, II 326-348
lithostratigraphy: Early Proterozoic sedimentary basins of the Lake Superior region
(Larue, D. K., *et al.*) 8: I 450-452, II 1836-1874
— Lower Paleozoic metasedimentary rocks in the East-central Sierra Nevada, California; correlation with Great Basin formations
(Moore, J. N., *et al.*) 1: I 37-43

metamorphic rocks—mineral assemblages
geologic thermometry: Update on feldspar and oxide thermometry in the Adirondacks Mountains, New York
(Bohlen, S. R., *et al.*) 2: I 110-113
phase equilibria: Metamorphic conditions at the northern end of the Northwest Adirondack lowlands
(Stoddard, E. F.) 2: I 100-102, II 589-616

metamorphic rocks—schists
petrology: Petrology, structure, and regional tectonics of South Fork Mountain Schist, Pine Ridge Summit, northern California
(Monsen, S. A., *et al.*) 6: I 369-373
textures: Dynamothermal contact metamorphism superposed on regional metamorphism in the pelitic rocks of the Chiwaukum Mountains area, Washington Cascades
(Plummer, C. C.) 7: I 386-388, II 1627-1668
— The structural analysis of the Wissahickon Schist near Philadelphia, Pennsylvania
(Tearpock, D. J., *et al.*) 11: I 644-647, II 2432-2456

metamorphic rocks—textures
fabric: Devonian metamorphic event in the northeastern Klamath Mountains, California
(Cashman, S. M.) 8: I 453-459
porphyroblastic texture: Displacement of inert mineral grains by growing porphyroblasts; a volume balance constraint
(Ferguson, C. C.) 9: I 541-544

metamorphism—age
absolute age: Devonian metamorphic event in the northeastern Klamath Mountains, California
(Cashman, S. M.) 8: I 453-459

metamorphism—contact metamorphism
aureoles: Geology of the Pine Hill intrusive complex, a layered gabbroic body in the western Sierra Nevada foothills, California
(Springer, R. K.) 7: I 381-385, II 1536-1626
schist: Dynamothermal contact metamorphism superposed on regional metamorphism in the pelitic rocks of the Chiwaukum Mountains area, Washington Cascades
(Plummer, C. C.) 7: I 386-388, II 1627-1668

metamorphism—grade
isograds: Stratigraphy, structure, and metamorphism in the central Panamint Mountains (Telescope Peak Quadrangle), Death Valley area, California
(Labotka, T. C., *et al.*) 3: I 125-129, II 843-933

metamorphism—mechanism
plate tectonics: Paleomagnetic evidence in support of a middle Proterozoic (Helikian) collision between North America and Gondwanaland as a cause of the metamorphism and deformation in the Adirondacks
(Seyfert, C. K.) 2: I 118-120, II 816-842

metamorphism—P-T conditions
mineral assemblages: Adirondack mafic granulites and a model lower crust
(Sack, R. O.) 2: I 89-93, II 349-442
— Calc-silicate reactions in Adirondack marbles; the role of fluids and solid solutions
(Valley, J. W., *et al.*) 2: I 114-117, II 720-815

metamorphism—polymetamorphism
effects: Precambrian(?) crystallization and Permian(?) metamorphism of hypersolvus granite in the Avalonian terrane of Rhode Island
(Day, H. W., *et al.*) 7: I 389-391, II 1669-1741

metamorphism—shock metamorphism
interpretation: Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior; replies
(Sage, R. P.) 5: I 313-316

metamorphism—temperature
geologic thermometry: Evaluation of coexisting garnet-biotite, garnet-clinopyroxene, and other Mg-Fe exchange thermometers in Adirondack granulites
(Bohlen, S. R., *et al.*) 2: I 107-109, II 685-719
— Geology and petrogenesis of marbles in the De Kalb area of northern New York
(Ross, G. M.) 2: I 103-105, II 617-658
— Metamorphic conditions at the northern end of the Northwest Adirondack lowlands
(Stoddard, E. F.) 2: I 100-102, II 589-616
— Update on feldspar and oxide thermometry in the Adirondacks Mountains, New York
(Bohlen, S. R., *et al.*) 2: I 110-113

meteor craters *see also under* geomorphology *under* Great Lakes region; Ontario

Mexico *see also* Gulf of California

Mexico—geochronology
Precambrian: North American Commission on Stratigraphic Nomenclature; Note 52, A preliminary proposal for a chronometric time scale for the Precambrian of the United States and Mexico
(Harrison, J. E., *et al.*) 6: I 377-380

Mexico—volcanology
Ceboruco: Geology and petrology of Volcan Ceboruco, Nayarit, Mexico
(Nelson, S. A.) 11: I 639-643, II 2290-2431

Michigan—structural geology
deformation: Slaty cleavage unrelated to tectonic dewatering; the Siamo and Michigamme slates revisited
(Beutner, E. C.) 3: I 171-178

Middle East *see also* Turkey

minerals *see also* crystal chemistry; crystal growth

minerals—framework silicates, feldspar group
myrmekite: Myrmekite as a marker between preaqueous and postaqueous phase saturation in granitic systems; discussion and reply
(Phillips, E. R., *et al.*) 11: I 672-674

minerals—framework silicates, silica minerals
opal: Cenozoic biogenic silica sedimentation in the Antarctic Ocean
(Brewster, N. A.) 6: I 337-347

minerals—framework silicates, zeolite group
authigenic minerals: Zeolitization of Miocene volcaniclastic rocks, southern Desatoya Mountains, Nevada
(Barrows, K. J.) 4: I 199-210

Mississippian *see also under* stratigraphy *under* Kentucky

Missouri—petrology
intrusions: Emplacement of the Butler Hill Granite, a shallow pluton within the St. Francois Mountains Batholith, southeastern Missouri
(Sides, J. R.) 9: I 535-540

Mollusca—biostratigraphy
Pleistocene: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306

Montana—geochronology
Precambrian: Age of the basement rocks of Southwest Montana
(James, H. L., *et al.*) 1: I 11-15

Montana—geomorphology
processes: Quaternary diversion and incision, Dearborn River, Montana
(Foley, M. G.) 10: I 576-577, II 2152-2188

mud volcanoes *see also* volcanology

nappes *see under* orientation *under* folds

Neogene *see also under* stratigraphy *under* Pacific Ocean

neotectonics *see also under* structural geology *under* Basin and Range Province; California; Great Basin; Kuwait; Nevada; New Zealand; Utah

Nevada—geochemistry
diagenesis: Zeolitization of Miocene volcaniclastic rocks, southern Desatoya Mountains, Nevada
(Barrows, K. J.) 4: I 199-210

Nevada—geochronology
Cretaceous: Cretaceous volcanism, Excelsior Mountains, Nevada
(Speed, R. C., *et al.*) 7: I 392-398

Nevada—stratigraphy
Triassic: Petrographic provinces and provenance of the Upper Triassic Luning Formation, West-central Nevada
(Reilly, M. B., *et al.*) 10: I 573-575, II 2112-2151

Nevada—structural geology
neotectonics: Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States
(Stewart, J. H.) 8: I 460-464

New England—geochronology
Mesozoic: Mesozoic erosion rates in northern New England
(Doherty, J. T., *et al.*) 1: I 16-20

New England—geomorphology
glacial geology: An analysis of drumlin form in the northeastern and North-central United States
(Mills, H. H.) 11: I 637-639, II 2214-2289

New England—stratigraphy
Devonian: Stratigraphic sequence of the Gile Mountain and Waits River formations near Royalton, Vermont
(Fisher, G. W., *et al.*) 5: I 282-286

New Hampshire—geochronology
Mesozoic: Mesozoic erosion rates in northern New England
(Doherty, J. T., *et al.*) 1: I 16-20

New Jersey—geochemistry
trace elements: Geochemical cross sections through the Watchung Basalt of New Jersey
(Puffer, J. H., *et al.*) 1: I 7-10, II 156-191

New Mexico—geophysical surveys
magnetic surveys: New evidence for magmatic intrusion beneath the Rio Grande Rift, New Mexico
(Towle, J. N.) 10: I 626-630

New Mexico—petrology
igneous rocks: An alkali-basalt through trachyte suite, Mesa Chivato, Mount Taylor volcanic field, New Mexico
(Crumpler, L. S.) 5: I 253-255, II 1293-1331
— Igneous origin of the orbicular rocks of the Sandia Mountains, New Mexico; discussion and reply
(Thompson, T. B., *et al.*) 4: I 245-247

New Mexico—tectonophysics
crust: New evidence for magmatic intrusion beneath the Rio Grande Rift, New Mexico
(Towle, J. N.) 10: I 626-630

New York—areal geology
Adirondack Mountains: Geology of the Adirondack Mountains
(Romey, W. D.) 2:
— Recent studies in Precambrian geology of the Adirondack Mountains; an introduction
(Romey, W. D.) 2: I 65-68, II 192-207
— The post-orogenic history of the Adirondack Mountain region; a review
(Selleck, B. W.) 2: I 120-124

New York—geochemistry
trace elements: Rare-earth-element geochemistry of anorthosite and related rocks from the Adirondacks, New York, and other massif-type complexes
(Ashwal, L. D., *et al.*) 2: I 105-107, II 659-684

New York—petrology
metamorphic rocks: Adirondack mafic granulites and a model lower crust
(Sack, R. O.) 2: I 89-93, II 349-442
— Calc-silicate reactions in Adirondack marbles; the role of fluids and solid solutions
(Valley, J. W., *et al.*) 2: I 114-117, II 720-815
— Geology and petrogenesis of marbles in the De Kalb area of northern New York
(Ross, G. M.) 2: I 103-105, II 617-658

— Geology of the Precambrian rocks between Elizabethtown and Mineville, eastern Adirondacks, New York
(Gasparik, T.) 2: I 78-88
— Stark Complex (Dexter Lake area); petrology, chemistry, structure, and relation to other green rock complexes and layered gneisses, northern Adirondacks, New York
(Brock, B. S.) 2: I 93-97, II 443-504
metamorphism: Evaluation of coexisting garnet-biotite, garnet-clinopyroxene, and other Mg-Fe exchange thermometers in Adirondack granulites
(Bohlen, S. R., *et al.*) 2: I 107-109, II 685-719
— Metamorphic conditions at the northern end of the Northwest Adirondack lowlands
(Stoddard, E. F.) 2: I 100-102, II 589-616
— Update on feldspar and oxide thermometry in the Adirondacks Mountains, New York
(Bohlen, S. R., *et al.*) 2: I 110-113

New York—stratigraphy
Paleozoic: Decollement in the Hudson River valley
(Murphy, P. J., *et al.*) 5: I 258-262, II 1394-1415
Pleistocene: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
— The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336
Proterozoic: Paleomagnetic evidence in support of a middle Proterozoic (Helikian) collision between North America and Gondwanaland as a cause of the metamorphism and deformation in the Adirondacks
(Seyfert, C. K.) 2: I 118-120, II 816-842

New York—structural geology
tectonics: A structural model for the northwestern Adirondacks based on leucogranitic gneisses near Canton and Pyrites, New York
(Romey, W. D., *et al.*) 2: I 97-100, II 505-588
— Decollement in the Hudson River valley
(Murphy, P. J., *et al.*) 5: I 258-262, II 1394-1415
— Fold growth and transposition in metasedimentary rocks of the southeastern Adirondacks
(Granath, J. W., *et al.*) 2: I 75-77, II 326-348
— Polyphase Precambrian deformation and stratigraphic relations, central to southeastern Adirondack Mountains, New York; a reinterpretation
(Turner, B. B.) 2: I 72-74, II 293-325
— Structural synthesis of the southern and central Adirondacks; a model for the Adirondacks as a whole and plate-tectonics interpretations
(McLelland, J., *et al.*) 2: I 68-72, II 208-292

New York—tectonophysics
plate tectonics: Structural synthesis of the southern and central Adirondacks; a model for the Adirondacks as a whole and plate-tectonics interpretations
(McLelland, J., *et al.*) 2: I 68-72, II 208-292

New Zealand—structural geology
neotectonics: Contemporary uplift and erosion of the Southern Alps, New Zealand
(Adams, J.) 1: I 2-4, II 1-114

New Zealand—tectonophysics
plate tectonics: Contemporary uplift and erosion of the Southern Alps, New Zealand
(Adams, J.) 1: I 2-4, II 1-114

nodules—manganese
composition: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

North America *see also* Appalachians; Atlantic Coastal Plain; Great Lakes; Great Lakes region; Mexico; Rocky Mountains; United States

North America—tectonophysics
crust: The Great Lakes tectonic zone; a major crustal structure in central North America
(Sims, P. K., *et al.*) 12: I 690-698
plate tectonics: Collision-deformed Paleozoic continental margin of Alaska; foundation for microplate accretion
(Churkin, M., Jr., *et al.*) 11: I 648-654
— Early Proterozoic sedimentary basins of the Lake Superior region
(Larue, D. K., *et al.*) 8: I 450-452, II 1836-1874
— Paleomagnetic evidence in support of a middle Proterozoic (Helikian) collision between North America and Gondwanaland as a cause of the metamorphism and deformation in the Adirondacks
(Seyfert, C. K.) 2: I 118-120, II 816-842
— The Hillabee Greenstone; a mafic volcanic complex in the Appalachian Piedmont of Alabama
(Tull, J. F., *et al.*) 1: I 27-36

North Carolina—geochronology
Cambrian: Age of zircon from volcanic rocks of the central North Carolina Piedmont and tectonic implications for the Carolina volcanic slate belt
(Wright, J. E., *et al.*) 5: I 287-294
Eocene: Rb-Sr glauconite isochron of the Eocene Castle Hayne Limestone, North Carolina
(Harris, W. B., *et al.*) 10: I 587-592

Northern Hemisphere *see also* Africa; Atlantic Ocean; North America; Pacific Ocean

Northwest Territories—geochronology
Pleistocene: Late Foxe glaciation of southern Baffin Island, N.W.T., Canada
(Miller, G. H.) 7: I 399-405

ocean circulation *see also under* oceanography *under* Atlantic Ocean

ocean floors *see also under* oceanography *under* Atlantic Ocean; Guatemala; Indian Ocean; Pacific Ocean

oceanography—instruments
corers: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444

Oklahoma—stratigraphy
Cambrian: Lithostratigraphic classification of basement rocks of the Wichita Province, Oklahoma
(Powell, B. N., *et al.*) 9: I 509-514, II 1875-1994

Ontario—geomorphology
meteor craters: Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior; replies
(Sage, R. P.) 5: I 313-316

Ontario—stratigraphy
Pleistocene: Remanence resetting by shock-induced thixotropy in the Seminary Till, Scarborough, Ontario, Canada
(Symons, D. T. A., *et al.*) 10: I 593-598

Ontario—structural geology
fractures: Tectonic origin for Sudbury, Ontario, shatter cones; discussion and reply
(Pattison, E. F., *et al.*) 12: I 754-756

ophiolite *see under* ultramafic family *under* igneous rocks

Ordovician *see also under* stratigraphy *under* California

Oregon—geochemistry
trace elements: Trace elements in continental-margin magmatism; Part I, Trace elements in the Clarno Formation of central Oregon and the nature of the continental margin on which eruption occurred
(Rogers, J. J. W., *et al.*) 4: I 196-198, II 1217-1292

Oregon—stratigraphy
Cenozoic: Interpretation of the Cenozoic geologic history, central Oregon continental margin; cross-section summary
(Snavely, P. D., Jr., *et al.*) 3: I 143-146

orogeny—absolute age
Virgilina Orogeny: Age of zircon from volcanic rocks of the central North Carolina Piedmont and tectonic implications for the Carolina volcanic slate belt
(Wright, J. E., *et al.*) 5: I 287-294

orogeny—evolution
Alpine Orogeny: Pre-Triassic fit and Alpine tectonics of continental blocks in the western Mediterranean; discussions and reply
(Mascle, G. H., *et al.*) 10: I 631-636
— Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587

Laramide Orogeny: Deformation of the Wenatchee Formation and its bearing on the tectonic history of the Chiwaukum Graben, Washington, during Cenozoic time
(Gresens, R. L.) 1: I 4-7, II 115-155
— The significance of fission-track ages of apatite in relation to the tectonic history of the Front and Sawatch ranges, Colorado
(Bryant, B., *et al.*) 3: I 156-164
Pan-African Orogeny: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706
— Trace elements in continental-margin magmatism; Part II, Trace elements in Ben Ghnema Batholith and nature of the Precambrian crust in central North Africa
(Rogers, J. J. W., *et al.*) 8: I 445-447, II 1742-1788
Penokean Orogeny: Early Proterozoic sedimentary basins of the Lake Superior region
(Larue, D. K., *et al.*) 8: I 450-452, II 1836-1874

orogeny—extent
Avalonian Orogeny: Precambrian(?) crystallization and Permian(?) metamorphism of hypersolvus granite in the Avalonian terrane of Rhode Island
(Day, H. W., *et al.*) 7: I 389-391, II 1669-1741

orogeny—mechanism
Grenvillian Orogeny: Paleomagnetic evidence in support of a middle Proterozoic (Helikian) collision between North America and Gondwanaland as a cause of the metamorphism and deformation in the Adirondacks
(Seyfert, C. K.) 2: I 118-120, II 816-842

Pacific Coast—tectonophysics
plate tectonics: Allochthonous Jurassic ophiolite in Northwest Washington
(Whetten, J. T., *et al.*) 6: I 359-368
— Deformation of the Wenatchee Formation and its bearing on the tectonic history of the Chiwaukum Graben, Washington, during Cenozoic time
(Gresens, R. L.) 1: I 4-7, II 115-155
— Franciscan complex limestone deposited at 17° south paleolatitude
(Alvarez, W., *et al.*) 8: I 476-484
— Interpretation of the Cenozoic geologic history, central Oregon continental margin; cross-section summary
(Snavely, P. D., Jr., *et al.*) 3: I 143-146
— Trace elements in continental-margin magmatism; Part I, Trace elements in the Clarno Formation of central Oregon and the nature of the continental margin on which eruption occurred
(Rogers, J. J. W., *et al.*) 4: I 196-198, II 1217-1292

Pacific Ocean *see also* Gulf of California

Pacific Ocean—oceanography
continental shelf: Large-scale structure of deep strata beneath Kodiak shelf, Alaska
(Fisher, M. A., *et al.*) 4: I 218-224
ocean floors: Hyaloclastite and lava flows on young seamounts examined with a submersible
(Lonsdale, P., *et al.*) 9: I 545-554
sediments: Surface sediments of the Peru-Chile continental margin and the Nazca Plate
(Krissek, L. A., *et al.*) 6: I 321-331

Pacific Ocean—stratigraphy
Neogene: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444
Quaternary: Paleomagnetic studies of central North Pacific sediment cores; stratigraphy, sedimentation rates, and the origin of magnetic instability
(Prince, R. A., *et al.*) 8: I 447-449, II 1789-1835

Pacific Ocean—tectonophysics
plate tectonics: Leg 67; the Deep Sea Drilling Project Mid-America Trench transect off Guatemala
(von Huene, R., *et al.*) 7: I 421-432
sea-floor spreading: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54
— Evidence for two fossil spreading ridges in the Southeast Pacific
(Mammerickx, J., *et al.*) 5: I 263-271
— Hyaloclastite and lava flows on young seamounts examined with a submersible
(Lonsdale, P., *et al.*) 9: I 545-554

Pacific region—tectonophysics
plate tectonics: Large-scale structure of deep strata beneath Kodiak shelf, Alaska
(Fisher, M. A., *et al.*) 4: I 218-224

paleoclimatology—Cenozoic
Antarctic Ocean: Cenozoic biogenic silica sedimentation in the Antarctic Ocean
(Brewster, N. A.) 6: I 337-347

paleoclimatology—evolution
paleo-oceanography: Tertiary and Cretaceous paleoenvironments in the Southwest Atlantic Ocean; preliminary results of Deep Sea Drilling Project Leg 71
(Ludwig, W. J., *et al.*) 11: I 655-664

paleoclimatology—Pleistocene
New York: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
— The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336
Northwest Territories: Late Foxe glaciation of southern Baffin Island, N.W.T., Canada
(Miller, G. H.) 7: I 399-405

paleoclimatology—Proterozoic
Utah: Upper Precambrian (Eocambrian) Mineral Fork Tillite of Utah; a continental glacial and glaciomarine sequence
(Ojakangas, R. W., *et al.*) 8: I 495-501

paleoecology—Pleistocene
New York: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
— The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336

Paleogene *see also under* stratigraphy *under* Italy

paleogeography *see also under* stratigraphy *under* Paleozoic

paleogeography—interpretation
continental drift: Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift; discussion and reply
(Burrett, C. F., *et al.*) 9: I 570-572

paleogeography—Proterozoic
Great Lakes region: Early Proterozoic sedimentary basins of the Lake Superior region
(Larue, D. K., *et al.*) 8: I 450-452, II 1836-1874

paleogeography—Triassic
Nevada: Petrographic provinces and provenance of the Upper Triassic Luning Formation, West-central Nevada
(Reilly, M. B., *et al.*) 10: I 573-575, II 2112-2151

paleomagnetism—Cenozoic
Caribbean Sea: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444

paleomagnetism—Cretaceous
Antarctica: Paleomagnetic evidence for oroclinal bending of the southern Antarctic Peninsula
(Kellogg, K. S.) 7: I 414-420
California: Franciscan complex limestone deposited at 17° south paleolatitude
(Alvarez, W., *et al.*) 8: I 476-484

paleomagnetism—Miocene
California: Geometric model for Neogene crustal rotations in southern California
(Luyendyk, B. P., *et al.*) 4: I 211-217

paleomagnetism—Pleistocene
Ontario: Remanence resetting by shock-induced thixotropy in the Seminary Till, Scarborough, Ontario, Canada
(Symons, D. T. A., *et al.*) 10: I 593-598

paleomagnetism—Quaternary
Pacific Ocean: Paleomagnetic studies of central North Pacific sediment cores; stratigraphy, sedimentation rates, and the origin of magnetic instability
(Prince, R. A., *et al.*) 8: I 447-449, II 1789-1835

Paleozoic *see also under* stratigraphy *under* Alaska; New York; Western U.S.

Paleozoic—stratigraphy
paleogeography: Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift; discussion and reply
(Burrett, C. F., *et al.*) 9: I 570-572

palynomorphs—biostratigraphy
Carboniferous: Permian-Carboniferous glaciation in the Arabian Peninsula
(McClure, H. A.) 12: I 707-712

palynomorphs—miospores
Pleistocene: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306
— The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336

Pennsylvania—structural geology
structural analysis: The structural analysis of the Wissahickon Schist near Philadelphia, Pennsylvania
(Tearpock, D. J., *et al.*) 11: I 644-647, II 2432-2456

Pennsylvanian *see also under* stratigraphy *under* Appalachians

Permian *see also under* stratigraphy *under* Arabian Peninsula

Peru—geomorphology
landform description: The extraordinary striated outcrop at Saqsaywaman, Peru; discussion and reply
(Marocco, R., *et al.*) 4: I 251-252

Peru—oceanography
sediments: Surface sediments of the Peru-Chile continental margin and the Nazca Plate
(Krissek, L. A., *et al.*) 6: I 321-331

petrology—classification
volcanic rocks: Calculation of the refractive index of silicate glasses from chemical composition
(Church, B. N., *et al.*) 10: I 619-625

phase equilibria—mineral assemblages
CaO-MgO-SiO_2-H_2O-CO_2: Geology and petrogenesis of marbles in the De Kalb area of northern New York
(Ross, G. M.) 2: I 103-105, II 617-658
Na_2O-CaO-FeO-MgO-Al_2O_3-SiO_2: Adirondack mafic granulites and a model lower crust
(Sack, R. O.) 2: I 89-93, II 349-442
P-T conditions: Calc-silicate reactions in Adirondack marbles; the role of fluids and solid solutions
(Valley, J. W., *et al.*) 2: I 114-117, II 720-815
— Evaluation of coexisting garnet-biotite, garnet-clinopyroxene, and other Mg-Fe exchange thermometers in Adirondack granulites
(Bohlen, S. R., *et al.*) 2: I 107-109, II 685-719
— Metamorphic conditions at the northern end of the Northwest Adirondack lowlands
(Stoddard, E. F.) 2: I 100-102, II 589-616

planetology *see also* Mars

Plantae *see also* algae; palynomorphs

Plantae—biostratigraphy
Pleistocene: Geology and paleontology of two late Wisconsin sites in western New York State
(Calkin, P. E., *et al.*) 5: I 295-306

plate tectonics *see also under* tectonophysics *under* Alaska; Antarctica; California; Jamaica; Mediterranean region; New York; New Zealand; North America; Pacific Coast; Pacific Ocean; Pacific region; Turkey

Pleistocene *see also under* geochronology *under* Northwest Territories; *see also under* stratigraphy *under* Atlantic Coastal Plain; Great Lakes region; New York; Ontario; Wisconsin

plutons *see under* intrusions

Precambrian *see also under* geochronology *under* Mexico; Montana; Rocky Mountains; United States

Proterozoic *see also under* geochronology *under* Appalachians; *see also under* stratigraphy *under* Great Lakes region; New York; Utah

Quaternary *see also under* stratigraphy *under* California; Caribbean Sea; Pacific Ocean; South Dakota

radioactive dating *see* absolute age

rare earths—abundance
anorthosite: Rare-earth-element geochemistry of anorthosite and related rocks from the Adirondacks, New York, and other massif-type complexes
(Ashwal, L. D., *et al.*) 2: I 105-107, II 659-684
sediments: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

Red Sea region—tectonophysics
crust: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706

regional geology *see* areal geology under the appropriate area term

Rhode Island—petrology
metamorphic rocks: Precambrian(?) crystallization and Permian(?) metamorphism of hypersolvus granite in the Avalonian terrane of Rhode Island
(Day, H. W., *et al.*) 7: I 389-391, II 1669-1741

rock mechanics *see also* soil mechanics

rock mechanics—deformation
flow: Experimental folding of rocks under confining pressure; Part VIII, Forced folding of unconsolidated sand and of lubricated layers of limestone and sandstone
(Friedman, M., *et al.*) 5: I 307-312

Rocky Mountains—geochronology
Precambrian: Age of the basement rocks of Southwest Montana
(James, H. L., *et al.*) 1: I 11-15

Rocky Mountains—seismology
crust: Crustal structure of the southern Rocky Mountains from seismic measurements
(Prodehl, C., *et al.*) 3: I 147-155

Rocky Mountains—structural geology
tectonics: The significance of fission-track ages of apatite in relation to the tectonic history of the Front and Sawatch ranges, Colorado
(Bryant, B., *et al.*) 3: I 156-164

sandstone *see also under* clastic rocks *under* sedimentary rocks

Saudi Arabia—stratigraphy
Carboniferous: Permian-Carboniferous glaciation in the Arabian Peninsula
(McClure, H. A.) 12: I 707-712

Scotland—geochemistry
isotopes: Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland
(Stephens, W. E., *et al.*) 3: I 165-170

sea-floor spreading *see also* continental drift; *see also under* tectonophysics *under* Atlantic Ocean; Gulf of California; Pacific Ocean

sedimentary rocks *see also* sedimentary structures; sedimentation; sediments

sedimentary rocks—carbonate rocks
lithostratigraphy: Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle
(D'Argenio, B., *et al.*) 12: I 681-689, II 2558-2587

sedimentary rocks—clastic rocks
black shale: Tertiary and Cretaceous paleoenvironments in the Southwest Atlantic Ocean; preliminary results of Deep Sea Drilling Project Leg 71
(Ludwig, W. J., *et al.*) 11: I 655-664
pyroclastics: Zeolitization of Miocene volcaniclastic rocks, southern Desatoya Mountains, Nevada
(Barrows, K. J.) 4: I 199-210
sandstone: Petrographic provinces and provenance of the Upper Triassic Luning Formation, West-central Nevada
(Reilly, M. B., *et al.*) 10: I 573-575, II 2112-2151
tillite: Upper Precambrian (Eocambrian) Mineral Fork Tillite of Utah; a continental glacial and glaciomarine sequence
(Ojakangas, R. W., *et al.*) 8: I 495-501
turbidite: Hydrodynamic and palaeogeographic interpretation of turbidite deposits from the Archaean Fig Tree Group of the Barberton Mountain Land, South Africa
(Eriksson, K. A.) 1: I 21-26

sedimentary rocks—lithofacies
environmental analysis: An alternative to the barrier-shoreline model for deposition of Mississippian and Pennsylvanian rocks in northeastern Kentucky
(Ettensohn, F. R.) 3: I 130-135, II 934-1056

sedimentary rocks—lithostratigraphy
Paleozoic: Collision-deformed Paleozoic continental margin of Alaska; foundation for microplate accretion
(Churkin, M., Jr., *et al.*) 11: I 648-654

sedimentary structures *see also* sedimentary rocks; sediments

sedimentary structures—biogenic structures
bioturbation: Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota
(Laury, R. L.) 8: I 465-475

sedimentary structures—genesis
furrows: Furrowed mud waves on the western Bermuda Rise
(Embley, R. E., *et al.*) 12: I 731-740

sedimentary structures—planar bedding structures
graded bedding: Stratigraphic sequence of the Gile Mountain and Waits River formations near Royalton, Vermont
(Fisher, G. W., *et al.*) 5: I 282-286

sedimentary structures—soft sediment deformation
clastic dikes: Slaty cleavage unrelated to tectonic dewatering; the Siamo and Michigamme slates revisited
(Beutner, E. C.) 3: I 171-178

sedimentary structures—turbidity current structures
graded bedding: Hydrodynamic and palaeogeographic interpretation of turbidite deposits from the Archaean Fig Tree Group of the Barberton Mountain Land, South Africa
(Eriksson, K. A.) 1: I 21-26

sedimentation—controls
structural controls: Early Proterozoic sedimentary basins of the Lake Superior region
(Larue, D. K., *et al.*) 8: I 450-452, II 1836-1874
tectonic controls: An alternative to the barrier-shoreline model for deposition of Mississippian and Pennsylvanian rocks in northeastern Kentucky
(Ettensohn, F. R.) 3: I 130-135, II 934-1056

sedimentation—cyclic processes
deltas: Use of altered volcanic ash falls in stratigraphic studies of coal-bearing sequences; an example from the Upper Cretaceous Ferron Sandstone Member of the Mancos Shale in central Utah
(Ryer, T. A., *et al.*) 10: I 579-586

sedimentation—deposition
sinkholes: Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota
(Laury, R. L.) 8: I 465-475
trenches: Leg 67; the Deep Sea Drilling Project Mid-America Trench transect off Guatemala
(von Huene, R., *et al.*) 7: I 421-432

sedimentation—environment
glacial environment: Upper Precambrian (Eocambrian) Mineral Fork Tillite of Utah; a continental glacial and glaciomarine sequence
(Ojakangas, R. W., *et al.*) 8: I 495-501
shelf environment: Lower Paleozoic metasedimentary rocks in the East-central Sierra Nevada, California; correlation with Great Basin formations
(Moore, J. N., *et al.*) 1: I 37-43
submarine canyons: Submarine-canyon complex among Cretaceous island-arc sediments, western Jamaica
(Grippi, J., *et al.*) 3: I 179-184

sedimentation—precipitation
submarine environment: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

sedimentation—provenance
sandstone: Petrographic provinces and provenance of the Upper Triassic Luning Formation, West-central Nevada
(Reilly, M. B., *et al.*) 10: I 573-575, II 2112-2151

sedimentation—rates
biogenic materials: Cenozoic biogenic silica sedimentation in the Antarctic Ocean
(Brewster, N. A.) 6: I 337-347
deep-sea environment: Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific; preliminary results of Deep Sea Drilling Project Leg 68
(Prell, W. L., *et al.*) 7: I 433-444
marine environment: Paleomagnetic studies of central North Pacific sediment cores; stratigraphy, sedimentation rates, and the origin of magnetic instability
(Prince, R. A., *et al.*) 8: I 447-449, II 1789-1835

sedimentation—transport
marine transport: Furrowed mud waves on the western Bermuda Rise
(Embley, R. E., *et al.*) 12: I 731-740
— Surface sediments of the Peru-Chile continental margin and the Nazca Plate
(Krissek, L. A., *et al.*) 6: I 321-331
stream transport: A sediment budget and an analysis of geomorphic process in the Van Duzen River basin, North coastal California, 1941-1975
(Kelsey, H. M.) 4: I 190-195, II 1119-1216
— Bed-rock incision by streams
(Foley, M. G.) 10: I 577-578, II 2189-2213
— Calculations of flows needed to transport coarse fraction of Boulder Creek alluvium at Boulder, Colorado
(Bradley, W. C., *et al.*) 3: I 135-138, II 1057-1090
— Contemporary uplift and erosion of the Southern Alps, New Zealand
(Adams, J.) 1: I 2-4, II 1-114
— Longitudinal changes in size and sorting of stream-bed material in four English rivers
(Knighton, A. D.) 1: I 55-62
— Quaternary diversion and incision, Dearborn River, Montana
(Foley, M. G.) 10: I 576-577, II 2152-2188
turbidity currents: Hydrodynamic and palaeogeographic interpretation of turbidite deposits from the Archaean Fig Tree Group of the Barberton Mountain Land, South Africa
(Eriksson, K. A.) 1: I 21-26
wind transport: Wind-driven sand in Coachella Valley, California; further data
(Sharp, R. P.) 12: I 724-730

sediments *see also* sedimentary rocks; sedimentary structures; sedimentation

sediments—chemically precipitated sediments
trace elements: Deposition of submarine crusts rich in manganese and iron
(Toth, J. R.) 1: I 44-54

sediments—clastic sediments
drift: Valders-Two Creeks, Wisconsin, revisited; the Valders Till is most likely post-Twocreekan
(Black, R. F.) 12: I 713-723

textures: Longitudinal changes in size and sorting of stream-bed material in four English rivers
(Knighton, A. D.) 1: I 55-62
till: Soils and subsurface rock-weathering features of Sherwin and pre-Sherwin glacial deposits, eastern Sierra Nevada, California
(Birkeland, P. W., *et al.*) 4: I 238-244

sediments—composition
siliceous composition: Cenozoic biogenic silica sedimentation in the Antarctic Ocean
(Brewster, N. A.) 6: I 337-347

sediments—distribution
statistical analysis: Surface sediments of the Peru-Chile continental margin and the Nazca Plate
(Krissek, L. A., *et al.*) 6: I 321-331

sediments—environmental analysis
sinkholes: Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota
(Laury, R. L.) 8: I 465-475

sediments—properties
magnetic properties: Paleomagnetic studies of central North Pacific sediment cores; stratigraphy, sedimentation rates, and the origin of magnetic instability
(Prince, R. A., *et al.*) 8: I 447-449, II 1789-1835

seismic surveys *see under* geophysical surveys *under* Alaska; Arabian Peninsula; Atlantic Ocean; Colorado; Wyoming

seismology—crust
velocity structure: Crustal structure of the North Atlantic on the basis of large-airgun - sonobuoy data
(Houtz, R. E.) 7: I 406-413
— Crustal structure of the southern Rocky Mountains from seismic measurements
(Prodehl, C., *et al.*) 3: I 147-155
— Large-scale structure of deep strata beneath Kodiak shelf, Alaska
(Fisher, M. A., *et al.*) 4: I 218-224

seismology—seismicity
seismotectonics: Seismotectonic regionalization of the Great Basin, and comparison of moment rates computed from Holocene strain and historic seismicity
(Greensfelder, R. W., *et al.*) 9: I 518-523, II 2039-2111

Silurian *see also under* stratigraphy *under* Vermont

slope stability *see also* geomorphology

soil mechanics *see also* rock mechanics

soil mechanics—materials, properties
magnetic properties: Remanence resetting by shock-induced thixotropy in the Seminary Till, Scarborough, Ontario, Canada
(Symons, D. T. A., *et al.*) 10: I 593-598

soils—surveys
California: Soils and subsurface rock-weathering features of Sherwin and pre-Sherwin glacial deposits, eastern Sierra Nevada, California
(Birkeland, P. W., *et al.*) 4: I 238-244

South Africa—sedimentary petrology
sedimentation: Hydrodynamic and palaeogeographic interpretation of turbidite deposits from the Archaean Fig Tree Group of the Barberton Mountain Land, South Africa
(Eriksson, K. A.) 1: I 21-26

South America *see also* Chile; Peru

South Dakota—stratigraphy
Quaternary: Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota
(Laury, R. L.) 8: I 465-475

Southern Hemisphere *see also* Africa; Antarctic Ocean; Antarctica; Atlantic Ocean; Indian Ocean; Pacific Ocean

Southwestern U.S.—tectonophysics
crust: Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States
(Stewart, J. H.) 8: I 460-464
mantle: New evidence for magmatic intrusion beneath the Rio Grande Rift, New Mexico
(Towle, J. N.) 10: I 626-630

springs *see also* ground water

stratigraphy—nomenclature
igneous rocks: North American Commission on Stratigraphic Nomenclature; Report 8, Amendment of Code concerning terminology for igneous and high-grade metamorphic rocks
(Henderson, J. B., *et al.*) 6: I 374-376
Portwashingtonian: The Portwashingtonian warm interval in the northern Atlantic Coastal Plain
(Sirkin, L., *et al.*) 6: I 332-336

strontium—isotopes
Sr-87/Sr-86: An alkali-basalt through trachyte suite, Mesa Chivato, Mount Taylor volcanic field, New Mexico
(Crumpler, L. S.) 5: I 253-255, II 1293-1331
— Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland
(Stephens, W. E., *et al.*) 3: I 165-170

structural analysis *see also* folds; foliation

structural analysis—folds
interference patterns: A structural model for the northwestern Adirondacks based on leucogranitic gneisses near Canton and Pyrites, New York
(Romey, W. D., *et al.*) 2: I 97-100, II 505-588
— Fold growth and transposition in metasedimentary rocks of the southeastern Adirondacks
(Granath, J. W., *et al.*) 2: I 75-77, II 326-348
— Polyphase Precambrian deformation and stratigraphic relations, central to southeastern Adirondack Mountains, New York; a reinterpretation
(Turner, B. B.) 2: I 72-74, II 293-325

structural analysis—foliation
slaty cleavage: Slaty cleavage unrelated to tectonic dewatering; the Siamo and Michigamme slates revisited
(Beutner, E. C.) 3: I 171-178

structural analysis—interpretation
interference patterns: Neogene deformation in northern Tunisia; origin of the eastern Atlas by microplate-continental margin collision
(Cohen, C. R., *et al.*) 4: I 225-237
— Stratigraphic sequence of the Gile Mountain and Waits River formations near Royalton, Vermont
(Fisher, G. W., *et al.*) 5: I 282-286
— The structural analysis of the Wissahickon Schist near Philadelphia, Pennsylvania
(Tearpock, D. J., *et al.*) 11: I 644-647, II 2432-2456
melange: Franciscan complex limestone deposited at 17° south paleolatitude
(Alvarez, W., *et al.*) 8: I 476-484
— Petrology, structure, and regional tectonics of South Fork Mountain Schist, Pine Ridge Summit, northern California
(Monsen, S. A., *et al.*) 6: I 369-373
petrofabrics: Devonian metamorphic event in the northeastern Klamath Mountains, California
(Cashman, S. M.) 8: I 453-459

structural petrology *see* structural analysis

Sudan—tectonophysics
crust: Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton
(Engel, A. E. J., *et al.*) 12: I 699-706

symposia—areal geology
Adirondack Mountains: Geology of the Adirondack Mountains
(Romey, W. D.) 2:

tectonics *see also* faults; folds; orogeny; structural analysis; *see also under* structural geology *under* Appalachians; California; Canadian Shield; Great Lakes region; New York; Rocky Mountains; Tunisia; Washington; Wyoming

tephrochronology *see under* geochronology

Tertiary *see also under* stratigraphy *under* Atlantic Ocean

thrust faults *see under* displacements *under* faults

trace elements *see under* chemically precipitated sediments *under* sediments; *see under* geochemistry *under* California; lava; Libya; magmas; metamorphic rocks; New Jersey; New York; Oregon

Triassic *see also under* stratigraphy *under* Nevada
Trilobita—biogeography
Paleozoic: Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift; discussion and reply
(Burrett, C. F., *et al.*) 9: I 570-572
Tunisia—structural geology
tectonics: Neogene deformation in northern Tunisia; origin of the eastern Atlas by microplate-continental margin collision
(Cohen, C. R., *et al.*) 4: I 225-237
turbidity current structures *see under* sedimentary structures
Turkey—tectonophysics
plate tectonics: Remnants of a pre-Late Jurassic ocean in northern Turkey; fragments of Permian-Triassic paleo-Tethys?
(Sengor, A. M. C., *et al.*) 10: I 599-609
underground water *see* ground water
United States *see also* the individual states and regions
United States—geochronology
Precambrian: North American Commission on Stratigraphic Nomenclature; Note 52, A preliminary proposal for a chronometric time scale for the Precambrian of the United States and Mexico
(Harrison, J. E., *et al.*) 6: I 377-380
United States—geomorphology
glacial geology: An analysis of drumlin form in the northeastern and North-central United States
(Mills, H. H.) 11: I 637-639, II 2214-2289
Utah—geophysical surveys
gravity surveys: Regional gravity survey, northern Marysvale volcanic field, South-central Utah
(Holliday, M. E., *et al.*) 8: I 502-508
Utah—stratigraphy
Cretaceous: Use of altered volcanic ash falls in stratigraphic studies of coal-bearing sequences; an example from the Upper Cretaceous Ferron Sandstone Member of the Mancos Shale in central Utah
(Ryer, T. A., *et al.*) 10: I 579-586
Proterozoic: Upper Precambrian (Eocambrian) Mineral Fork Tillite of Utah; a continental glacial and glaciomarine sequence
(Ojakangas, R. W., *et al.*) 8: I 495-501
Utah—structural geology
neotectonics: Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States
(Stewart, J. H.) 8: I 460-464
Vermont—stratigraphy
Silurian: Stratigraphic sequence of the Gile Mountain and Waits River formations near Royalton, Vermont
(Fisher, G. W., *et al.*) 5: I 282-286
Vertebrata *see also* Mammalia
volcanic features *see under* geomorphology
volcanism *see under* volcanology
volcanoes *see under* volcanology
volcanology—volcanism
age: Cretaceous volcanism, Excelsior Mountains, Nevada
(Speed, R. C., *et al.*) 7: I 392-398
volcanology—volcanoes
Ceboruco: Geology and petrology of Volcan Ceboruco, Nayarit, Mexico
(Nelson, S. A.) 11: I 639-643, II 2290-2431
Washington—geochronology
Jurassic: Allochthonous Jurassic ophiolite in Northwest Washington
(Whetten, J. T., *et al.*) 6: I 359-368
Washington—petrology
metamorphism: Dynamothermal contact metamorphism superposed on regional metamorphism in the pelitic rocks of the Chiwaukum Mountains area, Washington Cascades
(Plummer, C. C.) 7: I 386-388, II 1627-1668
Washington—structural geology
tectonics: Allochthonous Jurassic ophiolite in Northwest Washington
(Whetten, J. T., *et al.*) 6: I 359-368
— Deformation of the Wenatchee Formation and its bearing on the tectonic history of the Chiwaukum Graben, Washington, during Cenozoic time
(Gresens, R. L.) 1: I 4-7, II 115-155
weathering *see also under* geomorphology *under* Arctic region; California
well-logging—interpretation
faults: Tertiary faulting beneath Wadi Al-Batin (Kuwait)
(Al-Sarawi, A. M.) 10: I 610-618
West Indies *see also* Jamaica
Western Hemisphere *see also* Atlantic Ocean; North America; Pacific Ocean
Western U.S.—stratigraphy
Paleozoic: Lower Paleozoic metasedimentary rocks in the East-central Sierra Nevada, California; correlation with Great Basin formations
(Moore, J. N., *et al.*) 1: I 37-43
Wisconsin—stratigraphy
Pleistocene: Valders-Two Creeks, Wisconsin, revisited; the Valders Till is most likely post-Twocreekan
(Black, R. F.) 12: I 713-723
Wyoming—geophysical surveys
seismic surveys: Crustal structure of the southern Rocky Mountains from seismic measurements
(Prodehl, C., *et al.*) 3: I 147-155
Wyoming—structural geology
tectonics: The Heart Mountain break-away fault, northwestern Wyoming
(Pierce, W. G.) 5: I 272-281

NOTICE 1

ARTICLE SUMMARIES
(COMPLETE ARTICLES IN PART II)

Contemporary uplift and erosion of the Southern Alps, New Zealand: Summary ..... *John Adams* 2–4
(Complete article in *Part II*, Cards 1 and 2, p. 1–114)

Deformation of the Wenatchee Formation and its bearing on the tectonic history of the Chiwaukum graben, Washington, during Cenozoic time: Summary ..... *Randall L. Gresens* 4–7
(Complete article in *Part II*, Card 2 p. 115–155)

Geochemical cross sections through the Watchung Basalt of New Jersey: Summary ..... *J. H. Puffer and Paul Lechler* 7–10
(Complete article in *Part II*, Card 3 p. 156–191)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Age of the basement rocks of southwest Montana . *H. L. James and C. E. Hedge* 11–15

Mesozoic erosion rates in northern New England ..... *John T. Doherty and John B. Lyons* 16–20

Hydrodynamic and paleogeographic interpretation of turbidite deposits from the Archean Fig Tree Group of the Barberton Mountain Land, South Africa ..... *K. A. Eriksson* 21–26

The Hillabee Greenstone: A mafic volcanic complex in the Appalachian Piedmont of Alabama ..... *James F. Tull and Stephen H. Stow* 27–36

Lower Paleozoic metasedimentary rocks in the east-central Sierra Nevada, California: Correlation with Great Basin formations ..... *J. N. Moore and C. T. Foster, Jr.* 37–43

Deposition of submarine crusts rich in manganese and iron ..... *John R. Toth* 44–54

Longitudinal changes in size and sorting of stream-bed material in four English rivers ..... *A. D. Knighton* 55–62

A large landslide on Mars: Discussion and reply
Discussion ..... *D. M. Cruden*
Reply ..... *B. K. Lucchitta* 63–64

ARTICLE SUMMARIES
(COMPLETE ARTICLES IN PART II)

Recent studies in Precambrian geology of the Adirondack Mountains — An introduction: Summary ..... *William D. Romey*
(Complete article in *Part II*, Card 1, p. 192–207) 65–68

Structural synthesis of the southern and central Adirondacks: A model for the Adirondacks as a whole and plate-tectonics interpretations: Summary ..... *James McLelland and Yngvar Isachsen*
(Complete article in *Part II*, Cards 1 and 2, p. 208–292) 68–72

Polyphase Precambrian deformation and stratigraphic relations, central to southeastern Adirondack Mountains, New York: A reinterpretation: Summary ..... *Brian Buddington Turner*
(Complete article in *Part II*, Card 2, p. 293–325) 72–74

Fold growth and transposition in metasedimentary rocks of the southeastern Adirondacks: Summary ..... *James W. Granath and Noel Barstow*
(Complete article in *Part II*, Card 2, p. 326–348) 75–77

Adirondack mafic granulites and a model lower crust: Summary ..... *Richard O. Sack*
(Complete article in *Part II*, Card 3, p. 349–442) 89–93

Stark Complex (Dexter Lake area): Petrology, chemistry, structure, and relation to other green rock complexes and layered gneisses, northern Adirondacks, New York: Summary ..... *Brian S. Brock*
(Complete article in *Part II*, Card 4, p. 443–504) 93–97

A structural model for the northwestern Adirondacks based on leucogranitic gneisses near Canton and Pyrites, New York: Summary ..... *William D. Romey, William T. Elberty, Jr., Russell S. Jacoby, Roy Christoffersen, Tracy Shrier, and Douglass Tietbohl*
(Complete article in *Part II*, Card 5, p. 505–588) 97–100

Metamorphic conditions at the northern end of the northwest Adirondack Lowlands: Summary ..... *Edward F. Stoddard*
(Complete article in *Part II*, Card 6, p. 589–616) 100–102

Geology and petrogenesis of marbles in the Dekalb area of northern New York: Summary ..... *Gerald M. Ross*
(Complete article in *Part II*, Card 6, p. 617–658) 103–105

Rare-earth-element geochemistry of anorthosite and related rocks from the Adirondacks, New York, and other massif-type complexes: Summary ..... *Lewis D. Ashwal and Karl E. Seifert*
(Complete article in *Part II*, Card 7, p. 659–684) 105–107

Evaluation of coexisting garnet-biotite, garnet-clinopyroxene, and other Mg-Fe exchange thermometers in Adirondack granulites: Summary ..... *Steven R. Bohlen and Eric J. Essene*
(Complete article in *Part II*, Card 7, p. 685–719) 107–109

Calc-silicate reactions in Adirondack marbles: The role of fluids and solid solutions: Summary ..... *J. W. Valley and E. J. Essene*
(Complete article in *Part II*, Card 8, p. 720–815) 114–117

Paleomagnetic evidence in support of a middle Proterozoic (Helikian) collision between North America and Gondwanaland as a cause of the metamorphism and deformation in the Adirondacks: Summary ..... *Carl K. Seyfert*
(Complete article in *Part II*, Card 9, p. 816–842) 118–120

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Geology of the Precambrian rocks between Elizabethtown and Mineville, eastern Adirondacks, New York ..... *Tibor Gasparik* 78–88

Update on feldspar and oxide thermometry in the Adirondack Mountains, New York ..... *Steven R. Bohlen, Eric J. Essene, and Karen S. Hoffman* 110–113

The post-orogenic history of the Adirondack Mountain region: A review ..... *Bruce W. Selleck* 120–124

ARTICLE SUMMARIES
(COMPLETE ARTICLES IN PART II)

Stratigraphy, structure, and metamorphism in the central Panamint Mountains (Telescope Peak quadrangle), Death Valley area, California: Summary ..... *Theodore C. Labotka, Arden L. Albee, Marvin A. Lanphere, and S. Douglas McDowell* 125–129
(Complete article in *Part II*, Card 1, p. 843–933)

An alternative to the barrier-shoreline model for deposition of Mississippian and Pennsylvanian rocks in northeastern Kentucky: Summary ... *Frank R. Ettensohn* 130–135
(Complete article in *Part II*, Cards 2 and 3, p. 934–1056)

Calculations of flows needed to transport coarse fraction of Boulder Creek alluvium at Boulder, Colorado: Summary ..... *William C. Bradley and A. I. Mears* 135–138
(Complete article in *Part II*, Card 3, p. 1057–1090)

MAP SUMMARIES

Geologic cross section of the central Klamath Mountains, California: Map summary ... *Gregory A. Davis, Clifford J. Ando, Patricia H. Cashman, and Lee Goullaud* 139–142
(Map summary of Map and Chart Ser. 28-I)

Interpretation of the Cenozoic geologic history, central Oregon continental margin: Cross-section summary ..... *Parke D. Snavely, Jr., Holly C. Wagner, and Diane L. Lander* 143–146
(Map summary of Map and Chart Ser. 28-J)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Crustal structure of the southern Rocky Mountains from seismic measurements ..... *Claus Prodehl and L. C. Pakiser* 147–155

The significance of fission-track ages of apatite in relation to the tectonic history of the Front and Sawatch Ranges, Colorado ... *Bruce Bryant and C. W. Naeser* 156–164

Discontinuities in the composition surface of a zoned pluton, Criffell, Scotland ..... *W. E. Stephens and A. N. Halliday* 165–170

Slaty cleavage unrelated to tectonic dewatering: The Siamo and Michigamme slates revisited ..... *Edward C. Beutner* 171–178

Submarine-canyon complex among Cretaceous island-arc sediments, western Jamaica ..... *J. Grippi and K. Burke* 179–184

Mechanics of thin-skinned fold-and-thrust belts: Discussion ..... *David Elliott* 185–187

Mechanics of thin-skinned fold-and-thrust belts: Discussion ..... *Emile Rod* 188

ARTICLE SUMMARIES

Medals and Awards for 1979 189
(Complete text in *Part II*, Card 1, p. 1091–1118)

A sediment budget and an analysis of geomorphic process in the Van Duzen River basin, north coastal California, 1941-1975: Summary ..... *Harvey M. Kelsey* 190–195
(Complete article in *Part II*, Card 1, p. 1119–1216)

Trace elements in continental-margin magmatism: Part I. Trace elements in the Clarno Formation of central Oregon and the nature of the continental margin on which eruption occurred: Summary .... *John J. W. Rogers and Paul C. Ragland* 196–198
(Complete article in *Part II*, Card 1, p. 1217–1292)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Zeolitization of Miocene volcaniclastic rocks, southern Desatoya Mountains, Nevada ..... *Katherine J. Barrows* 199–210

Geometric model for Neogene crustal rotations in southern California .... *Bruce P. Luyendyk, Marc J. Kamerling, and Richard Terres* 211–217

Large-scale structure of deep strata beneath Kodiak shelf, Alaska ..... *Michael A. Fisher and Mark L. Holmes* 218–224

Neogene deformation in northern Tunisia: Origin of the eastern Atlas by microplate–continental margin collision .... *Curtis R. Cohen. Steven Schamel, and Patti Boyd-Kaygi* 225–237

Soils and subsurface rock-weathering features of Sherwin and pre-Sherwin glacial deposits, eastern Sierra Nevada, California ..... *P. W. Birkeland, R. M. Burke, and A. L. Walker* 238–244

Igneous origin of the orbicular rocks of the Sandia Mountains, New Mexico: Discussion and reply
Discussion ..... *Tommy B. Thompson and David L. Giles*
Reply .... *Robert Enz, Albert M. Kudo, and Douglas G. Brookins* 245–247

Rhythmic spacing and origin of pools and riffles: Discussion and reply
Discussion ..... *André G. Roy and Athol D. Abrahams*
Reply ..... *E. A. Keller and W. N. Melhorn* 248–250

The extraordinary striated outcrop at Saqsaywamán, Peru: Discussion and Reply
Discussion ..... *R. Marocco*
Reply ..... *Tomas Feininger* 251–252

ARTICLE SUMMARIES
(COMPLETE ARTICLES IN PART II)

An alkali-basalt through trachyte suite, Mesa Chivato Mount Taylor volcanic field, New Mexico: Summary .... *L. S. Crumpler* 253–255
(Complete article in *Part II*, Card 1, p. 1293–1331)

Petrology of the Castle Crags pluton, Klamath Mountains, California: Summary .... *Walter R. Vennum* 255–258
(Complete article in *Part II*, Cards 1-2, p. 1332–1393)

Decollement in the Hudson River Valley: Summary ..... . *Philip J. Murphy, Timothy L. Bruno, and Nicholas A. Lanney* 258–262
(Complete article in *Part II*, Card 2, p. 1394–1415)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Evidence for two fossil spreading ridges in the southeast Pacific ..... *J. Mammerickx, E. Herron, and L. Dorman* 263–271

The Heart Mountain break-away fault, northwestern Wyoming ... *William G. Pierce* 272–281

Stratigraphic sequence of the Gile Mountain and Waits River Formations near Royalton, Vermont ..... *George W. Fisher and Paul Karabinos* 282–286

Age of zircon from volcanic rocks of the central North Carolina Piedmont and tectonic implications for the Carolina volcanic slate belt ..... *James E. Wright and Victor M. Seiders* 287–294

Geology and paleontology of two late Wisconsin sites in western New York State ..... *Parker E. Calkin and John H. McAndrews* 295–306

Experimental folding of rocks under confining pressure, Part VIII — Forced folding of unconsolidated sand and of lubricated layers of limestone and sandstone .... *M. Friedman, R.H.H. Hugman III, and J. Handin* 307–312

Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior: Reply ..... *R. P. Sage* 313–314
(Reply to Discussion by H. C. Halls)

Diatremes and shock features in Precambrian rocks of the Slate Islands, northeastern Lake Superior: Reply ..... *R. P. Sage* 315–316
(Reply to Discussion by P. B. Robertson and R.A.F. Grieve)

JUNE

ARTICLE SUMMARY

Chronology of the structural and petrologic development of the southwest Sierra Nevada foothills, California: Summary ..... *Jason Saleeby and Warren Sharp* 317–320
(Complete article in *Part II*, Cards 1 and 2, p. 1416–1535)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Surface sediments of the Peru-Chile continental margin and the Nazca plate .... *Lawrence A. Krissek, Kenneth F. Scheidegger, and LaVerne D. Kulm* 321–331

The Portwashingtonian warm interval in the northern Atlantic coastal plain .... *Les Sirkin and Robert Stuckenrath* 332–336

Cenozoic biogenic silica sedimentation in the Antarctic Ocean .. *Nancy Ann Brewster* 337–347

Regional basement geology of Lake Huron ..... *Norbert W. O'Hara and William J. Hinze* 348–358

Allochthonous Jurassic ophiolite in northwest Washington ..... *John T. Whetten, Robert E. Zartman, Richard J. Blakely, and David L. Jones* 359–368

Petrology, structure, and regional tectonics of South Fork Mountain Schist, Pine Ridge Summit, northern California .... *Susan A. Monsen and K. R. Aalto* 369–373

North American Commission on Stratigraphic Nomenclature. Report 8 — Amendment of Code concerning terminology for igneous and high-grade metamorphic rocks ..... *John B. Henderson, W.G.E. Caldwell, and Jack E. Harrison* 374–376

North American Commission on Stratigraphic Nomenclature. Note 52 — A preliminary proposal for a chronometric time scale for the Precambrian of the United States and Mexico ..... *Jack E. Harrison and Zell E. Peterman* 377–380

JULY

ARTICLE SUMMARIES

Geology of the Pine Hill intrusive complex, a layered gabbroic body in the western Sierra Nevada foothills, California: Summary ..... *Robert K. Springer* 381–385
(Complete article in *Part II*, Card 1, p. 1536–1626)

Dynamothermal contact metamorphism superposed on regional metamorphism in the pelitic rocks of the Chiwaukum Mountains area, Washington Cascades: Summary ..... *Charles C. Plummer* 386–388
(Complete article in *Part II*, Card 2, p. 1627–1668)

Precambrian(?) crystallization and Permian(?) metamorphism of hypersolvus granite in the Avalonian terrane of Rhode Island: Summary ..... *Howard W. Day, V. Max Brown, and Kurt Abraham* 389–391
(Complete article in *Part II*, Cards 2 and 3, p. 1669–1741)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Cretaceous volcanism, Excelsior Mountains, Nevada ..... *R. C. Speed and R. W. Kistler* 392–398

Late Foxe glaciation of southern Baffin Island, N.W.T., Canada ..... *Gifford H. Miller* 399–405

Crustal structure of the North Atlantic on the basis of large-airgun–sonobuoy data ..... *R. E. Houtz* 406–413

Paleomagnetic evidence for oroclinal bending of the southern Antarctic Peninsula ..... *Karl S. Kellogg* 414–420

Leg 67: The Deep Sea Drilling Project Mid-America Trench transect off Guatemala *Roland von Huene and Jean Aubouin; Jacques Azema, Grant Blackinton, Jerry A. Carter, William T. Coulbourn, Darrell S. Cowan, Joseph A. Curiale, Carlos A. Dengo, Richard W. Faas, William Harrison, Reinhard Hesse, Donald M. Hussong, John W. Laad, Nikita Muzylov, Tsunemasa Shiki, Peter R. Thompson, and Jean Westberg* 421–432

Hydraulic piston coring of late Neogene and Quaternary sections in the Caribbean and equatorial Pacific: Preliminary results of Deep Sea Drilling Project Leg 68 ..... *Warren L. Prell and James V. Gardner; Charles Adelseck, Gretchen Blechschmidt, Andrew J. Fleet, Lloyd D. Keigwin, Jr., Dennis Kent, Michael T. Ledbetter, Ulrich Mann, Larry Mayer, William R. Reidel, Constance Sancetta, Dann Spariosu, and Herman B. Zimmerman* 433–444

AUGUST

ARTICLE SUMMARIES

Trace elements in continental-margin magmatism: Part II. Trace elements in Ben Ghnema batholith and nature of the Precambrian crust in central North Africa: Summary ..... *John J. W. Rogers, Kip V. Hodges, and Mohamed A. Ghuma* 445–447
(Complete article in *Part II*, Card 1, p. 1742–1788)

Paleomagnetic studies of central North Pacific sediment cores: Stratigraphy, sedimentation rates, and the origin of magnetic instability: Summary .... *Roger A. Prince, G. Ross Heath, and Michelle Kominz* 447–449
(Complete article in *Part II*, Card 1, p. 1789–1835)

Early Proterozoic sedimentary basins of the Lake Superior region: Summary .... *D. K. Larue and L. L. Sloss* 450–452
(Complete article in *Part II*, Card 2, p. 1836–1874)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Devonian metamorphic event in the northeastern Klamath Mountains, California ..... *Susan M. Cashman* 453–459

Regional tilt patterns of late Cenozoic basin-range fault blocks, western United States ..... *John H. Stewart* 460–464

Paleoenvironment of a late Quaternary mammoth-bearing sinkhole deposit, Hot Springs, South Dakota .... *Robert L. Laury* 465–475

Franciscan Complex limestone deposited at 17° South paleolatitude .... *Walter Alvarez, Dennis V. Kent, Isabella Premoli Silva, Richard A. Schweickert, and Roger A. Larson* 476–484

Structural behavior of fracture zones symmetric and asymmetric about a spreading axis: Mid-Atlantic Ridge (latitude 23°N to 27°N) .... *Peter A. Rona and Dale F. Gray* 485–494

Upper Precambrian (Eocambrian) Mineral Fork Tillite of Utah: A continental glacial and glaciomarine sequence .... *Richard W. Ojakangas and Charles L. Matsch* 495–501

Regional gravity survey, northern Marysvale volcanic field, south-central Utah .... *Mark E. Halliday and Kenneth Cook* 502–508

ARTICLE SUMMARIES

Lithostratigraphic classification of basement rocks of the Wichita province, Oklahoma: Summary ..... *Benjamin N. Powell, M. Charles Gilbert, and Joseph F. Fischer* 509–514
(Complete article in *Part II*, Cards 1 and 2, p. 1875–1994)

Late Cenozoic volcanic rocks of the southern Sierra Nevada, California: I. Geology and petrology: Summary ... *James G. Moore and Franklin C. W. Dodge* 515–518
(Complete article in *Part II*, Card 2, p. 1995–2038)

Seismotectonic regionalization of the Great Basin, and comparison of moment rates computed from Holocene strain and historic seismicity: Summary .... *Roger W. Greensfelder, Frederick C. Kintzer, and Malcolm R. Somerville* 518–523
(Complete article in *Part II*, Cards 2 and 3, p. 2039–2111)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Twentieth-century crustal deformation in the Garlock fault–Slate Range area, southeastern California .. *George I. Smith and Jack P. Church* 524–534

Emplacement of the Butler Hill Granite, a shallow pluton within the St. Francois Mountains batholith, southeastern Missouri ..... *J. Ronald Sides* 535–540

Displacement of inert mineral grains by growing porphyroblasts: A volume balance constraint ..... *C. C. Ferguson* 541–544

Hyaloclastite and lava flows on young seamounts examined with a submersible ... . *Peter Lonsdale and R. Batiza* 545–554

Immature plate boundary zones studied with a submersible in the Gulf of California .. .. *Peter Lonsdale and L. A. Lawver* 555–569

Distributional model for marine isopod crustaceans and its bearing on early Paleozoic paleozoogeography and continental drift: Discussion and reply
Discussion ..... *Clive F. Burrett*
Reply ..... *Michael E. Taylor and Richard M. Forester* 570–572

OCTOBER

ARTICLE SUMMARIES

Petrographic provinces and provenance of the Upper Triassic Luning Formation, west-central Nevada: Summary .... *Maureen B. Reilly, John A. Breyer, and John S. Oldow* 573–575
(Complete article in *Part II*, Card 1, p. 2112–2151)

Quaternary diversion and incision, Dearborn River, Montana: Summary .... *Michael G. Foley* 576–577
(Complete article in *Part II*, Card 1, p. 2152–2188)

Bed-rock incision by streams: Summary .... *Michael G. Foley* 577–578
(Complete article in *Part II*, Card 2, p. 2189–2213)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Use of altered volcanic ash falls in stratigraphic studies of coal-bearing sequences: An example from the Upper Cretaceous Ferron Sandstone Member of the Mancos Shale in central Utah .... *T. A. Ryer, R. E. Phillips, B. F. Bohor, and R. M. Pollastro* 579–586

Rb-Sr glauconite isochron of the Eocene Castle Hayne Limestone, North Carolina ..... *W. Burleigh Harris and Victor A. Zullo* 587–592

Remanence resetting by shock-induced thixotropy in the Seminary Till, Scarborough, Ontario, Canada ..... *D.T.A. Symons, M. Stupavsky, and C. P. Gravenor* 593–598

Remnants of a pre–Late Jurrassic ocean in northern Turkey: Fragments of Permian-Triassic Paleo-Tethys? ..... . *A. M. Celal Şengör, Yücel Yilmaz, and Ihsan Ketin* 599–609

Tertiary faulting beneath Wadi Al-Batin (Kuwait) .... *A. Mohammad Al-Sarawi* 610–618

Calculation of the refractive index of silicate glasses from chemical composition .... *B. N. Church and W. M. Johnson* 619–625

New evidence for magmatic intrusion beneath the Rio Grande rift, New Mexico .... *James N. Towle* 626–630

Pre-Triassic fit and alpine tectonics of continental blocks in the western Mediterranean: Discussion and reply
Discussion ..... *Georges H. Mascle*
Discussion ..... *Jacques Bourgois*
Reply ..... *Robert Bourrouilh and Donn S. Gorsline* 631–636

ARTICLE SUMMARIES

An analysis of drumlin form in the northeastern and north-central United States: Summary ..... *Hugh H. Mills* 637–639
(Complete article in *Part II*, Card 1, p. 2214–2289)

Geology and petrology of Volcán Ceboruco, Nayarit, Mexico: Summary .... *Stephen A. Nelson* 639–643
(Complete article in *Part II*, Cards 2 and 3, p. 2290–2431)

The structural analysis of the Wissahickon Schist near Philadelphia, Pennsylvania: Summary ..... *Daniel J. Tearpock and Richard Bischke* 644–647
(Complete article in *Part II*, Card 3, p. 2432–2456)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Collision-deformed Paleozoic continental margin of Alaska — Foundation for microplate accretion . *Michael Churkin, Jr., Claire Carter, and James H. Trexler, Jr.* 648–654

Tertiary and Cretaceous paleoenvironments in the southwest Atlantic Ocean: Preliminary results of Deep Sea Drilling Project Leg 71 ..... *William L. Ludwig, Valery Krasheninnikov, Ivan A. Basov, Ulf Bayer, Jan Bloemendal, Brian Bornhold, Paul Ciesielski, Elaine H. Goldstein, Christian Robert, John C. Salloway, John L. Usher, Hans Von Der Dick, Fred M. Weaver, and Sherwood W. Wise, Jr.* 655–664

Use of immobile trace elements to determine original tectonic setting of eruption of metabasalts, northern Sierra Nevada, California ..... *Elwood R. Brooks and David G. Coles* 665–671

Myrmekite as a marker between preaqueous and postaqueous phase saturation in granitic systems: Discussion and reply
Discussion ..... *Evan R. Phillips*
Reply ..... *M. J. Hibbard* 672–674

DECEMBER

ARTICLE SUMMARY

Geology and petrology of the Nordeste volcanic complex, São Miguel, Azores: Summary ..... *Louis A. Fernandez* 675–680
(Complete article in *Part II*, Cards 1 and 2, p. 2457–2557)

ARTICLES COMPLETE IN THIS ISSUE OF PART I

Stratigraphic evidence for crustal thickness changes on the southern Tethyan margin during the Alpine cycle ..... *Bruno D'Argenio and Walter Alvarez* 681–689
(Appendices and tables in *Part II*, Card 2, p. 2558–2587)

The Great Lakes tectonic zone — A major crustal structure in central North America ..... *P. K. Sims, K. D. Card, G. B. Morey, and Z. E. Peterman* 690–698

Late Precambrian evolution of Afro-Arabian crust from ocean arc to craton ..... *A.E.J. Engel, T. H. Dixon, and R. J. Stern* 699–706

Permian-Carboniferous glaciation in the Arabian Peninsula ..... *H. A. McClure* 707–712

Valders — Two Creeks, Wisconsin, revisited: The Valders Till is most likely post-Two-creekan ..... *Robert F. Black* 713–723

Wind-driven sand in Coachella Valley, California: Further data ... *Robert P. Sharp* 724–730

Furrowed mud waves on the western Bermuda Rise ..... *R. E. Embley, P. J. Hoose, P. Lonsdale, L. Mayer, and B. E. Tucholke* 731–740

Submarine topography and shallow structure of the Madagascar Ridge, western Indian Ocean ... *Jean Goslin, Jacques Segoufin, Roland Schlich, and Robert L. Fisher* 741–753

Tectonic origin for Sudbury, Ontario, shatter cones: Discussion and reply
Discussion ..... *Edward F. Pattison*
Reply ..... *Michael E. Fleet* 754–756
